Thread: [\[C++\] Mega Packs of Source code](#)

Russ. - August 10, 2015, 11:43 am

*Closed so no one can grave dig this.

Here is a list of what is in each pack, note that most are C++ but there are other languages like VB. This is not all of the packs, I am only gonna post what HackForums has allowed (botnets, crypters, R.A.Ts, keyloggers and binders).

If you would like one of them please PM me with the pack you want and I will send you the link along with the password.

Also I am not responsible with what you do with these source's. Just releasing them for everyone who wants to learn from them.

Ok, Will add links now along with the password.

Emnity - August 10, 2015, 1:53 pm

Damn, this is a really nice share to learn more from. I think we'd all appreciate a different Mirror, speedy.sh is extremely slow to download. Thank you. :)

Ok, Will get working on another mirror for everyone.

Only3 - August 10, 2015, 2:36 pm

^^ first make mirror for the large files bots and rats
guess it will help the market place ?

I'm not responsible if you infect yourself. Don't run the .exe's. Just build them off source files. Be smart about it.
