Thread: [I Pay for VB6 CODING -1 small project good pay-](#)

K0zero - August 12, 2015, 11:28 am

Language is vb6

1. Someone to debug a dynamic link library (.dll) from local PC, that .dll is used by some website to get a hwid from pc. (you can use VBdisassembler, tested)

The dll returns a string (HWID) which after is sent over to IExplorer.

2. Want a hwid retriever that gets the returned string in order to build a secondary dll.

3. I want the second dll to be written in order to return whatever the original dll on the original PC would return only that the second dll would be on another PC. (maybe reading the string from a text file)

4. Also the website has some sort of dll checking system, I think that would be solved with a dll hooking or dll replacer simple app.

If you got the skills I will pay nicely.

I am willing to discuss how the payment shall be made.

If you got questions please PM, we talk.

I am sure there are vb6 coders on HF. Why not taking some time to make a little project? Sure it will worth it.

Dude you've had this job ad for over a month now and nobody is responding. VB6 is dead.

K0zero - August 17, 2015, 3:29 am

Somebody has to know it. At least the old guys..
