Thread: [IP Info Grabber Source](#)

Burakku Kenshi - August 13, 2015, 12:09 am

This is the source code for my simple little program that you can see here:

<https://hackforums.net/showthread.php?tid=4947331>

Here is the download link: http://www.mediafire.com/download/o3dklpnf4ynk674/IP_Info.rar

It's simpler than I expected, try to get those informations from a website as geoiptool.com.

nathan72389 - August 13, 2015, 4:36 am

dont really need a whole source for 1 line of code.

```
Code CarbonFiberTextBox2.Text = Wc.DownloadString("http://ip-api.com/csv/" &  
CarbonFiberTextBox1.Text).Replace(", ", vbNewLine).Replace("","")
```

```
Code Public Class Form1
```

```
Private Sub CarbonFiberButton1_Click(sender As Object, e As EventArgs) Handles
```

```
CarbonFiberButton1.Click
```

```
Dim T As New Threading.Thread(AddressOf GrabInfo)
```

```
T.IsBackground = True
```

```
T.Start()
```

```
End Sub
```

```
Sub GrabInfo()
```

```
CarbonFiberButton1.Enabled = False
```

```
CarbonFiberTextBox1.Enabled = False
```

```
CarbonFiberTextBox2.Enabled = False
```

```
CarbonFiberTextBox2.Text = ""
```

```
Using Wc As New Net.WebClient
```

```
CarbonFiberTextBox2.Text = Wc.DownloadString("http://ip-api.com/csv/" &
```

```
CarbonFiberTextBox1.Text).Replace(", ", vbNewLine).Replace("","")
```

```
End Using
```

```
CarbonFiberButton1.Enabled = True
```

```
CarbonFiberTextBox1.Enabled = True
```

```
CarbonFiberTextBox2.Enabled = True
```

```
End Sub
```

```
Private Sub Form1_Load(sender As Object, e As EventArgs) Handles Me.Load
```

```
CheckForIllegalCrossThreadCalls = False
```

```
End Sub
```

```
Private Sub CarbonFiberButton2_Click(sender As Object, e As EventArgs) Handles
```

```
CarbonFiberButton2.Click
```

```
Process.Start("http://www.whatismyipaddress.com/ip/" & CarbonFiberTextBox1.Text)
```

```
End Sub
```

```
End Class
```

p.s. haha, you suck

Code CheckForIllegalCrossThreadCalls = False

End Class
p.s. haha, you suck
Code CheckForIllegalCrossThreadCalls = False
No need to be so rude, but using CheckForIllegalCrossThreadCalls is indeed bad!
```

That's why I told you to try making it with another complicate website as geoiptool.com. It will be
harder.

Okay i'll check that out.
I only recently started coding so thanks for the advice ?
