Thread: [Darkcomet doesn't connect at all](#)

Sarcastic Desires - August 13, 2015, 5:32 am

Hi everyone,

I'm having an issue with Darkcomet.
As you can see [here](#), I've portforwarded my ports.
Yet it does not connect to me at all.
I've disabled my firewall (and windows defender).

What else could be going wrong?

IHasBrains - August 13, 2015, 8:04 am

Are you usning a dns/vpn?

Neos07 - August 13, 2015, 8:06 am

Try it on yourself using 127.0.0.1, I'm wating for the result.

Does not work, I tried using my IP, localhost or my DNS.
Non worked.

I think it's a problem from your pc, maybe disable AV and Firewall.

My skype: neos07.simo, if you want help.

Are your server settings correct?

Neos07 - August 13, 2015, 8:19 am

Close Darkcomet, and try with njRAT: same port same dns.

njRAT: <https://hackforums.net/showthread.php?tid=4937501>

njRAT works, yet darkcomet doesn't. Well, this is weird..

Good, so it's just a setting problem.

If you use DC's Security Password feature (which you should), make sure that your custom password in the Client Settings matches the one in your Server Builder.

And are you using the latest (clean and unmodified) version of DarkComet?
