Thread: [Rat tutorial, What rat to buy/use, What crypters to buy](#)

ze-slade - August 13, 2015, 7:10 pm

Table of contents

THIS THREAD IS FOR EDUCATION PURPOSES ONLY.

I. How to set up your rat.

II. What rat to buy.

III. What free rats to use.

IIII. What crypter to buy.

V. FAQ.

I'll add more as this thread grows.

I

How to setup your rat

1. Open your rat

You can find one [here](#) It's one I recommend if you are starting out.

2. Open a port on your router

Open cmd and type in ipconfig find default gateway and type the numbers into your browser's url bar (eg. 123.123.123.123). You can find a tutorial [here](#).

FOR STEP 3 I DON'T RECOMMEND FREE DNS ANYMORE, THEY HAVE BEEN CRACKING DOWN ON PEOPLE USING THEIR DNS SERVICE TO RAT!

3. Sign up or login on [FreeDNS](#) once that's done click subdomains and then create a subdomain, on there press the "add" button. click [here](#) to find where the add dns button is.

If you are using duck dns or no-ip, stop using them duck dns is a honeypot and no-ip works with the feds.

4. Create your stub.

Tutorials below on how to do that.

5. Do whatever you want with your new stub, if a client off your network executes it they will appear on your rat if you are on at the time and they are on at the time if the anti virus doesn't delete it then have them make the anti virus add that file as an exception or if they don't know how to do that just crypt it with a cryptor.

Click [here](#) to view how to create a stub with nj rat.
I will add more tutorials with more rats on how to create stubs later.

II

What rats to buy

1. [Luminosity Link](#)

I've heard great things about this RAT, it seems to be the best rat currently.

2. [Imminent Monitor 3](#)

Support is slow but it's a all around great rat.

3. [NanoCore](#)

Though they remove a feature that was useful it's stability makes up for it majorly.

This list will be updated as I buy more rat's/get opinions on this thread. (if I missed any that are good let me know.)

III

Free rats.

1. [NJrat](#)

this is one of the best free rats out there.

2. [DarkComet](#)

It's unstable but the features make up for it.

3. [Jrat](#)

Great rat if you need to rat a mac/linux/windows computer.

I suggest going to [THIS](#) thread, armada goes over what rats to buy/download with much more depth.

IIII

What crypters to buy.

1. [BosonLight](#)

Hands down one of my favorite crypters, the support is amazing and I've used this before and it was an amazing experience with it.

2. [ByteCrypter](#)

It has a lot of features and seems to be pretty good

3. [DeluxeCrypte](#)

From what I've heard It's almost always fud and has quite a lot of features too.

4. [Trillium crypt reloaded](#)

Features and fud, seems pretty nice but the layout could be better.

5. [Cryptex Reborn](#)

I liked cryptex_light when I bought it, I can only assume the more advanced version of it is way better.

6. [Cryptex Light](#)

I love this cheap crypter, It's great for starters, It's alright on being undetected, you just need a icon to make it fud/close to fud sometimes.

V

FAQ.

<http://pastebin.com/Q2G9ywp5>

(if your question is not up here then ask via posting here or pming me.)

More will be added and this will be updated as I get more suggestions/I buy any. This is just recommendations from what I've seen and heard.

?l??? ??t - August 14, 2015, 3:37 pm

i would rate you to add some more crypters to the thread like :

- Cloud crypter
- Voluty Pure Crypter
- Cryptex Light/Reborn

Neos07 - August 14, 2015, 3:40 pm

Add free rats too, not everybody can pay for a rat.

njRAT: <https://hackforums.net/showthread.php?tid=4937501>

Strayta - August 14, 2015, 3:41 pm

Awesome guide here man. Good job

bzr? - August 14, 2015, 3:44 pm

Good job on the thread, OP, very useful stuff.

KFC Watermelon - August 14, 2015, 3:48 pm

The link to LuminosityLink should be this one:

<https://hackforums.net/showthread.php?tid=4778957>

Nice thread :)

Nice thread :)
Updated thread, thanks for the catch.

???? ???? - August 14, 2015, 10:25 pm

Nice Thread Good for the beginners has all the info you need to get going

Benevolent - August 15, 2015, 1:55 am

Byte works extremely smooth with imminent monitor and luminosity link amazing <3

xchg - August 15, 2015, 6:50 am

Excellent tutorial.

I too can vouch for ByteCrypter. One of the most HQ products I have ever used.

Armada - August 15, 2015, 7:40 am

Very nice straight forward tutorial man.

Curious why you addressed setup and config of the RAT before purchase\RAT selection though?
Seems kinda backwards to me, but regardless. all the central points were hit and cleanly explained
?

Would recommend adding a link to [THIS THREAD](#) as well for additional selection
recommendations. ?

anon4957 - August 15, 2015, 10:51 am

Actually why people prefer njRat over DarkComet? Is it because its easier to setup and use?

ze-slade - August 15, 2015, 12:59 pm

Is it because its easier to setup and use?

Since it's more stable and with dark comet you can't rar people who have windows 8.1 and up.

I'll definatley add this since this is more detailed. With the setting up rats before the rat Liste I'm not

sure why I did that I was just trying to rush it so I didn't get any posts on the thread before it was finished.

(Aug 14, 2015 10:25 PM)studerman1 Wrote: [\[CITE\]](#) Nice Thread Good for the beginners has all the info you need to get going

Thanks! I was trying to make this so people don't need to wait for free help.

(Aug 15, 2015 01:55 AM)Benevolent Wrote: [\[CITE\]](#) Byte works extremely smooth with imminent monitor and luminosity link amazing <3

Glad to hear they both are great programs!

(Aug 15, 2015 06:50 AM)Kygo Wrote: [\[CITE\]](#) Excellent tutorial.

I too can vouch for ByteCrypter. One of the most HQ products I have ever used.

So far my favorite was mysterious crypter but that got off the market.

ze-slade - August 20, 2015, 4:33 pm

Updated the crypters, added BosonLight since It's back and it was one of my favorite crypters besides mysterious.

ze-slade - September 23, 2015, 3:31 pm

If you can see any other crypters, rats, steps I missed, please pm me or let me know I'm wanting to update this but I'm not sure what to add to it.

DamienVC - September 23, 2015, 5:05 pm

Recommend:

LuminosityLink

Ozone

NanoCore

In IM3 you'll get locked out of your license in a few days and you'll have to wait 6 months to get it back
