Thread: [Detailed BTC Mining Tutorial for Luminosity](#)

swiftblackhat - August 13, 2015, 11:21 pm

Hi so today im going to try to give back to the community a little bit with a tutorial on how to CryptoMine BTC using LuminosityLink.

Step 1: Apply on a mining pool of your choice for this tutorial i will be using Slush Pools, here's a link to apply
<https://mining.bitcoin.cz>

after you make an account go to
My Account and then go to Workers

Step 2: Create a new worker
Fill it out like this leave the rest blank unless you know what your doing.

Now you need a miner

I got one from here

<https://hackforums.net/showthread.php?tid=3482928&highlight=Mine>

If you have your own miner that's okay to,

LL has a built in Miner if you go to setup miner config fill out all the information as below (Easiest Way)

step 3:Now fill the Miner out

In Bar one put The pool you'll be mining in.

Bar two is your Username a period than your worker name

In Bar 3 put your password if you have one

Now load your miner into Luminosity and encrypt it

Next upload it using a direct link

Miner File download: This will be your direct download to your encrypted miner

Miner file id:This can be random it just stops you from running the same file over and over again on the same one person if there numbers match.

Miner parameter: This will be blank if you are using your own Miner.

But If you are using Luminosity to mine after you setup Miner Config it should fill itself in.

Should look something like this

Now when you Test Miner Config this should pop up Now your mining to!

Now check in a few minuets on the website you should see these go up

If it does than congrats your mining! ?

If it doesn't and your stuck reply below and ill try my best to answer and questions.

Workers take a few minuets to update that there mining on the website for the pool your mining in so dont freak out if right away it doesn't show its mining, As long as the test config worked everything should run smooth

Thanks for reading my first tutorial ?

Bump Posted half finished yesterday just finished it though. Enjoy ?

duffmanohyeahr - September 15, 2015, 3:05 pm

like that tutorial even its old thx for it!

Coletheon - September 15, 2015, 3:22 pm

What do i have to put in miner parameters ?

Das Reich - September 15, 2015, 3:25 pm

Nice tutorial, i'm sure it will help out alot of people.

Incendiary. - September 15, 2015, 4:27 pm

Im sure this tutorial will help alot of people. I will include a link to it in my thread.

Just saying, you cant expect to get more then a few cents when mining BTC. Its not profitable to mine it :\

Denkhetook - September 15, 2015, 4:37 pm

i dont know anything about btc mining but for example i let 10 pcs mine how much btc will i make in 24h?

President Morty - September 15, 2015, 5:04 pm

Random thing, BTC mining is alot slower in mining.

A penny or two.. Not even that? ? It's not even worth it.

0.0000001 BTC. If you are REALLY lucky.

You'll most likely end up getting that much with 50+ bots over a week.

You are alot better off mining for a altcoin, like LTC or OMC.

topkek80s - September 16, 2015, 6:51 am

It would take 20k+ PC's at a time with the average CPU (pentium,amd APU's,etc...) to make anything to where bitcoin is a decent option.

alfaGt - September 18, 2015, 5:10 am

In this way there is a 120% chance of having the account blocked for too many different

connections. Right?

Not alot bro BTC mining isint very profitable without dedicated mining rigs, This is a technical question though it depends on how much power the computers have

(Sep 15, 2015 04:27 PM)Incendiary. Wrote: [\[CITE\]](#) Im sure this tutorial will help alot of people. I will include a link to it in my thread.

Hey bro i dont get this question, I think your asking if it will get blocked by the site for the pool your mining on?? But no you would not get banned if thats what your asking?

if i didnt answer your question try to ask again and ill try to help

I suggest mining something smaller like ominicoins and hope the prices go up in the future ?

swiftblackhat - November 21, 2015, 10:25 pm

hope this can still help people

swiftblackhat - January 8, 2016, 9:19 pm

hope this can still be of help to someone :)
