WhiteHatAir - August 14, 2015, 8:45 am

Hello! I just finished my second program=)!

Spoiler ([Click to View](#)) <https://gyazo.com/496d06d9a81232beb0258934061df6ef>

Virus Scan:

<https://www.virustotal.com/sv/file/b033789250d48586aaa957c7dc74c6d0847adfd818d52c3e868bd520aff6c9ca/analysis/1439566968/>

Download:

<http://www.mediafire.com/download/ckwsatn6lbn325s/Mass+Resolver.exe>

Let me know what you think!

What do you want me to code next??

Kind and best regards,

WhiteHatAir

?

Soulx - August 14, 2015, 8:46 am

Looks good.! Keep up the good work, i love that you're coding.

I don't think you'll learn much by copying and pasting your previous code with a new URL, so I'll give you a small challenge to get you thinking.

As it stands, your program has multiple button event handlers with the same code in each, but with a different URL. Try to figure out how to cut it down to a single event handler and a single method. Once that's done, add some error handling (try/catch).

It's easy to get something to work, but yours only works part of the time.

What happens when the server is down?

What happens when the server returns an error?

What happens when the user's internet is down?

What happens when a user's system proxy is set?

I'm trying to get you think of everything that can go wrong with your program while you're writing it.
It'll save you the trouble of it crashing on you later.

Btw I've ready ur comemnt and i'm editing my program right now.

nathan72389 - August 14, 2015, 1:47 pm

what do you want the coding section to do with your exe file?

if we (coding section) wanted this then we (coding section) would just make it ourselves.

there is a special section just for tools, maybe you should post it over there.

Beast.PHP - August 16, 2015, 10:38 am

Hey man, this is pretty cool but you should of added a replace method to get rid of the <html>

Also, protect your apis & don't use predator(they are slow imo.)

WhiteHatAir - August 16, 2015, 10:41 am

Ah, okay man. If you want some help I could help ;)

CYNTEX - August 16, 2015, 1:36 pm

haha looks really nice :)

?Astronaut? - August 16, 2015, 1:43 pm

Why did you make a program for resolving? You could just use the web based resolver you got the API from...

It is much faster, all you really got to do is open a program instead of typing in the api url.

Idk. I personally wont be downloading it because I think something online would be faster to access rather than a program. I guess it's an opinion thing.

WhiteHatAir - August 17, 2015, 1:23 am

Well I hope you guys like it =) Let me know if there is anything else you guys want me to code =)!

First post and gravedig.

alexcat - June 17, 2017, 4:04 pm

Does it still work with new skype? Web based resolvers don't work anymore.
