Thread: [How FUD Ardamax keylogger v4.3.9 = 4.4](#)

tra_extra - August 15, 2015, 5:02 am

There are two situations about Ardamax Keylogger:

- 1-Remote installation exe file.
- 2-Files after installing rat on target machine.

Which Crypter/Binder can FUD Ardamax Keylogger in both ways?

There are some deprecated -- YouTube -- learnings about FUD of ardamax that are very old and are not useful anymore.

For those learnings search this phrase in GOOGLE:

"how fud ardamax"

What is your suggestions?

The Milkman - August 15, 2015, 6:58 am

Well, you should simply purchase a good FUD Crypter in the marketplace section, like CloudCrypter for example, it should do it's job...

Anyway, Ardamax is not the best key logger, and this two-ways logging is harassing to crypt.

Regards.

Thanks for the answer,

Can you tell me how does CloudCrypte crypt Ardamax?

I am c# web developer and tried many times to crypt Ardamax, but all possible ways failed.

Coding in c#, Changing it's assembly, etc...

The problem was after changing exe file of ardamax by a Binder/Crypter, exe file can not run again and that Crypter destroys exe file.

Would you please introduce more crypters?
