Secure Password Generator

By Toby

Welcome to the Secure Password Generator's official release thread. It took me a minute to prepare it so you've got to give me some credit.

Screenshots:

If you're unsure if it's safe, you can use [VirusTotal.com](#) to check.

Download: [via Mediafire](#)

Open Source Download: [via Mediafire](#)

Extra: [Check How Secure Your Password Is](#)

Enjoy ?

If you are learning the language its a good starting project.

Maybe somebody will find it usefull.

Edit: took a look at the code you shouldnt put everything in Form1.

It's not a starting project, it's more of a renewing. I haven't coded in like 6 months.

Oh ok, maybe you should make it open source so that other people could learn from it, because i think nobody will actualy make a password with this or an other password generators.

Thankyou very much John! I am just a beginner in vb. Hope the source helps me in learning something. You are so nice. :)

neofusion - August 16, 2015, 10:04 am

Nice starting project. :)

Try to add a copy button on it, so that the generated passwords could be copied easily.

suffICE - August 21, 2015, 7:17 pm

Not too secure, I'd add something with ? and ! and stuff... Cool project though, add a function to save the passwords and encrypt/decrypt them upon opening or closing a different form and that'd be a cool way to store them
