Thread: [Check if the file exist inside the URL / website files folder](#)

SwaggySwampMan - August 17, 2015, 3:46 am

What to do here?

I aint asking for the code.

I want to check if the files existed in the directory "Users" from an URL ?

Code if (!File.Exists("localhost/Users/2.2.2.2.2.2)) // This will check if the directory file "2.2.2.2.2.2.2" existed inside the Users directory from the URL localhost then do something if does not exist.

```
{
    Console.WriteLine("IP Address does not exist!");
    goto Main;
}
```

You should look into WebRequests. Should be just what you need.
