Thread: [Reborn Cryptex is the perfect Crypter ever](#)

DemonSquard - August 17, 2015, 7:05 am

Reborn Cryptex is the best crypts on hackforums.net. If you have problems with Dark Comet. I advise you to change for Njrat. It is a marvel.

The characteristics is that it is truly Runtime and SCANTIME.

This is the Ferrari of encryption on the HACKFORUMS.NET. I really advise you to buy it. I tested several encrypt Encrypt as Razor. But Razor Encrypt tools are very good if you search your encrypted only SCANTIME server.

For now I hope you could share your opinion.

Le créateur de Reborn Cryptex il est très gentil. ?

Since when does that stop anything.

Steam, Skype, loads of other commonly used programs use .net so chances are who ever you are targeting already has it installed. If you don't, it'll ask you to instal it, big deal? Don't think so.

I open the discussion. I like this guy (Killamuvz). But I hate Razor Crypt. I love the products (Cryptex Reborn). Even if the guy sent me the bad reputation.

The dangers of selling crypters - check out this thread: [hxxps://hackforums.net/showthread.php?tid=5800545&page=7](https://hackforums.net/showthread.php?tid=5800545&page=7)

TLDR version - the seller offering this service was caught by the UK's national crime agency and sentenced to 2 years jail time.

It's a chilling message for sellers in this industry, but there are lessons:

- 1: It's dangerous to offer services that are illegal in your jurisdiction.
- 2: The authorities do monitor marketplaces like the one on this forum.
- 3: Using publicly traceable payment systems to buy and sell illegal services is tempting fate.
