Thread: [Ddos systems I have](#)

THINKBOTS - August 22, 2015, 2:08 am

So, I have a cmd to ddos websites and LOIC also. Is there any else free equipment around so then I can ddos other sites?

NY - August 22, 2015, 2:12 am

...

set up an irc botnet
use services
buy a vps and use it for weak ass attacks
or just do something that requires a little more skill

Hicupish - August 22, 2015, 2:39 am

CMD isn't entirely going to work as efficient as you'd want.. but you could purchase services for DDOS in the server stress testing section in Premium Sellers section if you have a little extra \$ on you. This is the most efficient and easiest way in my opinion

This is DoS, not distributed denial of service since you are using your own home connection against someone elses.

This isn't the 56k modem era anymore, you're not going to be able to disconnect anyone with DoS, especially not a website.

.... So what are you going to do with a VPS and how do said bots help you out?
