Thread: [Scaffold Walk \[Need Help\]](#)

Leonhard08kl - August 23, 2015, 1:33 am

Ok, so this code only works in SinglePlayer, can you help me make it work in Multiplayer

```
Code public void onEvent(Event event) {
    if (!this.getState()) {
        return;
    }
    if(event instanceof EventPreUpdate) {
        BlockPos bp = new BlockPos(this.mc.thePlayer.posX, this.mc.thePlayer.posY,
this.mc.thePlayer.posZ);
        if(this.mc.theWorld.getBlockState(bp).getBlock().getMaterial() == Material.air) {
            this.mc.thePlayer.sendQueue.addToSendQueue(new C08PacketPlayerBlockPlacement(bp,
EnumFacing.DOWN.getIndex(), this.mc.thePlayer.inventory.getCurrentItem(),
bp.getX(),bp.getY(),bp.getZ()));

        }
    }
}
```

4QW9n - August 23, 2015, 3:44 am

The reason it doesn't work is because you are placing blocks in air.

Make it so you place blocks on the side of other blocks or something.

Thats whats scaffold walk is for. To place block underneath you in the air. Or I didn't understand what you said (if so sorry)

-----u

[] [] air air

u place block like this

-----u

[] [] [v] air v = EnumFacing.DOWN

you need to place block on block

-----u

[] [] [<] air v = EnumFacing. opposite of player direction (or complex formula by lord pankake)

so u gotta place a bock on the side of the block that u were on that you're walking off

Hyphlix - August 23, 2015, 12:45 pm

-----u

[] [] [<] air v = EnumFacing. oppopsite of player direction (or complex formula by lord pankake)

so u gotta place a bock on the side of the block that u were on that you're walking off
Vouch complex algorithm method is best method by rederpz best coder and pancakes

Leonhard08kl - August 25, 2015, 11:04 am

Just got it thanks :) It's not that hard to code

What he means is place the blocks on the side of the blocks you already place. So if you walk of a cliff or something you dont place the blocks in the air below you, but rather on the side of the blocks you walk off.

BennyHax - August 26, 2015, 2:30 am

What do you mean by "-----u"

YaBoii - August 26, 2015, 6:17 am

(Aug 26, 2015 02:30 AM)BennyHax Wrote: [\[CITE\]](#) What do you mean by "-----u"

----- is nothing. u = you. Meaning you stand on the edge of a block.

DieEnte - May 7, 2016, 3:53 am

Can anyone send a code of this?

rederpz - May 7, 2016, 4:01 am

Replace Material.Air with Material.Water. Is that so hard?

Whispers - May 17, 2016, 1:32 pm

(May 17, 2016 06:32 AM)Ninja Wrote: [\[CITE\]](#) Replace Material.Air with Material.Water. Is that so hard?Yeah, it's really that easy. You can also do some pretty cool stuff with the BlockLiquid class as well.

Basically places blocks underneath you, making a bridge when you walk.

Whispers - May 18, 2016, 6:21 pm

Here's a visual... If you look at 18-25 seconds in the video it shows pretty much what scaffold walk is, but I guess it's mostly used for skywars. It seems pretty unique though.

Eh, I remember Nahr made that Lilypad walking shit that basically did the same thing except it helped you walk across water.

Whispers - May 18, 2016, 6:33 pm

(May 18, 2016 06:30 PM)Proctor Wrote: [\[CITE\]](#) Eh, I remember Nahr made that Lilypad walking shit that basically did the same thing except it helped you walk across water.Yeah, I'd like to see something different in clients for a change. They are always the same mods and same shit tbh.

I have spoken to quite a few developers and they have some unique ideas, they just never make them for some reason o.o

Lmentv - June 13, 2017, 1:05 pm

Please help me,

i am creating my own minecraft hack client an i want a Scaffold Walk please can someone send me o code of Scaffold Walk.

Thanks[/size]
