Thread: [Help in converting .EXE to .SCR](#)

DarkEvolution - August 23, 2015, 5:57 pm

Hello im looking for a method on how to convert a RAT file which is .exe to be converted to .scr so its more trusted and more people will open the file, if there is a better method like being able to change a .exe file to .pgn file and for the RAT to still function correctly i would like some advice

(i)(c)(u)(r)(u)(o)(k) - August 23, 2015, 6:25 pm

You are looking for file spoofing

File conversion is not a good method and will cause errors or issues most of the time in the final build

You can use the charmap tool to select the reverse string char

This will allow you to make the file look like its a jpg or png or anything you want but will still be executed as a exe file.

There are also pre-built tools that automate this just search the forums for a file spoofer

Armada - August 23, 2015, 6:27 pm

Just rename the file... there is no need to spoof the file to another form of binary executable. Or better yet, save it as a .scr to begin with.?

(i)(c)(u)(r)(u)(o)(k) - August 23, 2015, 6:31 pm

Create a exe the loads a avi movie and opens it with systems default player...

Bind this exe that plays a avi movie to your exe..

Use file spoofing to spoof the file from a exe into a avi

Use a icon changer to change its icon to a avi symbol

Now the user sees it as a .avi file and when double clicking it it does what it should.

Spoofing has its ups

I did not understand your method, sorry to ask, but can you rephrase? or explain it to dumb it down for me.

I cannot simply change the file's name or edit, i've tried resource hacker but the file changes .scr.exe and looks suspicious.

Paul Wilson - August 23, 2015, 6:43 pm

You change the extention from exe to scr, just enable all extentions, rename file.exe to file.scr, no program needed ;)

(i)(c)(u)(r)(u)(o)(k) - August 23, 2015, 6:44 pm

You use a file spoofer click the search button on this forum and search file spoofer

Or search a tutorial on using the charmap tool to do it yourself.

I've searched couldn't find anything.

Here is a 1337 tutorial on making a .exe a .scr.

Right click a .exe. Rename it from whatever.exe to whatever.scr.

BOOM. HAX BRO.

Good job, you might want to read my previous message, let me repeat my self, it is not compatible

for me to just be able to rename it, it's not as simple as that, that's why i started this post in the first place.

What the flying hell are you smoking?

He wants to mask it as a Screen Saver, not an AVI movie.

Dont over complicate stuff. Simply RENAME the file from EXE to SCR. Jobs done.

OK, open cmd

Code cd C:\Fakepath\yourfolder

type file.exe> file.screenjoy

I did not understand what you just said
Step 1: open CMD by hitting WINDOWS KEY + R and typing cmd
Step 2: Type this into the black window that appears: cd [the folder where your stub is]
Step 3: Now type in this: type [your file name].exe> screenshot.scr
Step 4: A file named screenshot.scr will appear. This is your stub with the scr extention

If you still need help then PM me your skype and I will spoonfeed you the instructions like a 3 year old
