Thread: [Try Answer This! *Will post answer soon!*](#)

Lifeless? - August 23, 2015, 7:58 pm

I will post the answer to this soon, good luck!

MrWineGum - August 23, 2015, 8:01 pm

A and 2, right? To check, as they're the only vowel and even number. We know that K and 7 wouldn't have followed it because they're neither a vowel nor even number.

Pury - August 23, 2015, 8:01 pm

A and 7 #Psychology Major

Duyere - August 23, 2015, 8:03 pm

The cards that need to be turned over are: A, K, 7.

Basis based on the numbering of letters in alphabet:

A = 1

K = 11

B = 2

G = 7

Did I win?

Human - August 23, 2015, 8:05 pm

All of them? This is a stupid question. Why not just flip them all over. There in front of you

Maze - August 23, 2015, 8:06 pm

K is irrelevant, it doesn't need to be turned over.

Guy above is correct, it's A and 7.

G = 7

Did I win?

Why would there be a alphabet sequence

?Cyber - August 23, 2015, 8:07 pm

A - should have an even on the other side

2 - should have a vowel on the other side

K - should not have a even number on the other side

7 - should not have a vowel on the other side

GSlick - August 23, 2015, 8:11 pm

(Aug 23, 2015 08:01 PM)Pury Wrote: [\[CITE\]](#) A and 7 #Psychology Major

He is correct.

The 2 and King don't need to be flipped because it doesn't say there needs to be a vowel on the other side of an even number, or a non-even number on the other side of a non-vowel.

Bow down before me peasants

Jay???? - August 23, 2015, 8:17 pm

We need to get rid of K and 4. They're completely irrelevant because with them we cannot combine the two to make a vowel or odd number.

Lifeless? - August 24, 2015, 8:15 am

Congrats to all who said A 7
