Thread: [Laptop not booting correctly](#)

Lil Bibby - August 24, 2015, 1:15 pm

Recently out of no where my laptop will not boot up correctly, it asks to start in a windows startup repair mode but once in that it shows nothing.

Then if started normally it will blue screen and restart to fast for me to get the error.

Any help is greatly appreciated

archangel.dmitry - August 24, 2015, 1:19 pm

You need to get BSoD code(s) for that you can use a camera in video mode.

Alright I did that an am getting "Mountable_Boot_Volume"

I'm gonna try re sitting the ram and everything unless there's another solution

EDIT re sitting ram and hdd did absolutely nothing.

It could be a lot of things. Start with running Memtest. If it passes, run "chkdsk" to check condition of the disk.

I'm not sure how to start with memtest due to it not being able to start at all and I'm on my phone atm

archangel.dmitry - August 24, 2015, 1:56 pm

You will have to download Memtest ISO and put it on an USB or CD. It does not require Windows. You should be able to start "chkdsk" from the recovery menu.

I don't have any other pc in my house so I guess I'll have to wait till the weekend to do anything.

Is there a public library near you or a friend that will let you use their PC to download the ISO?

The earliest I would be able to download the ISO is probably tomorrow night. I'll update thread once

I've done the memtest ISO

freemium - August 25, 2015, 5:39 am

If you have a Hiren's Boot DVD, try using Paragon HDM - in there you will have boot corrector, mbr fix and some other things...

Now just give boot corrector a try...hopefully it will fix it :) good luck

Lil Bibby - August 25, 2015, 6:45 pm

Update I downloaded and ran the Memtest Iso and it told me there were no errors detected, yet I'm still unable to boot up and if I start in Recovery Mode nothing shows up on the screen.

Lil Bibby - August 28, 2015, 1:34 pm

Anyone know what the problem could be? Still haven't found anything out.

archangel.dmitry - August 28, 2015, 2:49 pm

Have you tested your HDD for errors including bad sectors?

Lil Bibby - August 28, 2015, 8:51 pm

I'm not sure how to do so if it won't boot, I ran Memtest ISO and it detected no errors

Ultimate Boot CD has some tools that you can use to test your HDD for errors.

<http://www.ultimatebootcd.com/download.html>

I would suggest downloading the ISO and burning it off to a CD or creating a live USB. Then booting your computer off of it.

Lil Bibby - September 12, 2015, 8:42 pm

Gonna this one last time to see if anyone knows what could be happening.

Also if anyone knows anymore boot programs or scans I can run I would greatly appreciate it, anything will help.

Hiren's boot CD is another great Live CD with a great collection of tools that you should check out.

xfreedom - September 13, 2015, 6:15 am

Why don't you just try to reinstall windows ?

If you got some datas to save, you can use a live cd of windows or linux.

Exige - September 13, 2015, 7:39 am

If you have to reinstall, do it with a bootable flash drive. Upon installation method, choose custom,

and go through the installation. Once you are on your desktop after a new installation, open your file explorer, go to C:\, and under the Windows folder, you'll see Windows.old

In there is everything from your last installation, including your personal stuff like pictures, music, anything you had on your desktop

Good luck, I don't know what could be causing this issue, but at least if you have to redo your OS, you'll keep your important files

Lil Bibby - *September 13, 2015, 3:21 pm*

Update : I am using Hirens boot Cd and I'm running some version of linux, all my files are here and it is not detecting anything being corrupt.

I new to this Cd so is does anyone know if there is a program to run windows 7 without it loading the corrupted file?
