Thread: [Networking & Network security | Null Community program](#)

Avunit? - August 27, 2015, 5:06 pm

NETWORKING & SECURITY TUTORING

On behalf of Null I'm offering a networking and network security program free of charge to the wider community.

It will be taught over the course of 11-12 separate scheduled group sessions using Skype, join.me and a series of private resources that will be made available to the students.

The aim of this program is to give you a beginner to intermediate level of knowledge in the various areas of networking covered below, however, keen students are welcome to stay behind 'after class' to discuss any other topics that interest them - provided my schedule allows for it.

This program will be limited to 15 places and I'm looking for enthusiastic and intelligent members with a keen interest in learning about networking to take part. You must be prepared to put some time in to independent study outside of the sessions, somewhere in the range of 1-2 hours per week dependent on the subject area. You must also try your best to attend all sessions, failure to do so may result in being removed from the program so please refrain from applying if you know your schedule is going to be busy - sorry.

TOPICS COVERED

OSI, TCP/IP stack.

LAN terminology, topologies, standards and addressing. [2 sessions]

Networking applications, devices and configuration.

Mathematical techniques in networking, address design and wider Internet addressing schemes. [2 sessions]

Routing platforms, principles, protocols and configuration. Internetworking. [2 sessions]

Operating systems.

Network security. [3 sessions]

There is no set structure for the application, just show me that you're going to be a hard working and reliable student. Account stature will play no part in my decision of who to accept on to the program, however if you are a valuable and generous member who gives back to the community it definitely wont hurt your chances. I intend to run this course several times, so even if you don't get in

the first time it is likely that you will be invited to a subsequent run-through at some point in the future.

Please note, this program is launched under Null's name as a way of sharing group knowledge and engaging with the community and is in no way affiliated with the Null student program.

Students should have no expectation of being added to the Null group as a result of participating.

Please don't use graphics in your applications. Just coherent, left-aligned paragraphs will be perfect.

Canonsx130 - August 27, 2015, 7:34 pm

I'd be absolutely delighted to get mentored on networking & security topics. I have only basic knowledge about the terminologies when it comes to networking and would love to expand my knowledge. I have two big personal projects coming up and both require very good knowledge over networking as a whole to accomplish and this would be a perfect platform for me to learn more about it. I've never made a bad impression on any members in here so I can guarantee I'll keep up to the standards set by you while I'm in the program. I'm sure I'll be able to complete any tasks assigned to me on time as well. I also thank you for laying out this awesome platform, free of charge to all members which is quite an awesome thing to do. Thanks to you and good luck to other applicants.

hfakar - August 28, 2015, 5:24 am

I would love to be a part of this. Currently working on a company as a software intern. But I am all learning about networks in my spare time. This is a perfect time for me. If there will be any tasks I will work hard on them to make what is wanted. I am not just writing it because it seems cool. Network is a MUST to be a good expert on cyber security.

Th3PonyWizard - August 28, 2015, 11:17 am

Null has been through a reboot. We're shifting the aim from our own pockets to the community. Lets bring back some much-needed education.

Roger Waters - August 28, 2015, 11:31 am

Best of luck with this. IMHO groups need to do more free programs like this for the community.

xchg - August 28, 2015, 11:32 am

Is there an official application we have to fill out, or do we just post back here?

If we can just post; I would love to be apart of this program. I have always felt my knowledge on network and security needed to be strengthened and this seems like the perfect way to do so. I have a very open schedule currently with a lot of time on my hands; and I can see this being a perfect way to spend my time.

Aside from my schedule (which again is completely free), I am also very enthusiastic about network security. I have always loved the Null group/what they are about and I would be absolutely thrilled to get to work with you guys on a subject I greatly admire.

Thank you guys so much for allowing this as a free service to the community. I'm really looking forward to working with you all.

Regards,
Kygo

Aur3xis - August 28, 2015, 11:45 am

About me

Im 17 years old and im into hacking pretty much snice i was a little kid. Mainly i was specialized in SQLi, XSS and SE attacks but as the time passed by i became lazy for few years and forgot most of what i learned, that's why im looking to refresh my knowledge in Network-security and expand it aswell! Basicly what i do now is learn python, atm im at the second month of learning it and i really enjoy it, but im lookin to get into Network-Security as i was always interested in it but never really had a chance to learn something about it

Why i want to join

I would love to become a student of this class as i always was lookin to expand my knowledge in networking and network security! Im very dedicated to everything i start learning and also this seems to be a great starting point for me to learn something usefull in the field of networking and network security!

Avunit? - August 28, 2015, 3:03 pm

I'll start going through the applications once a few more have been posted and I'd prefer it if you didn't use graphics in your applications, just coherent paragraphs please. Graphics just make them harder to read.

(Aug 28, 2015 11:31 AM)Roger Waters Wrote: [\[CITE\]](#) Best of luck with this. IMHO groups need to do more free programs like this for the community.

Thanks, I've put quite a lot of time and effort in to preparing this course so I hope it will be worthwhile.

Scar . - August 28, 2015, 4:31 pm

A Little About Me:

I'm 18 years old, just starting college to major in electrical engineering. I'm very open minded about almost anything. I love to learn new things all the times. I have an excellent work ethic, I work hard on everything I do. You could even say that I'm sort of an over-achiever.

Why I'd Like To Be Selected:

I'd love to be part of this program because I've always wanted to look into networking but for me it's really hard for me to learn by just following written tutorials. I'm the type of learner that needs to have interaction with a person/teacher/tutor. I will be able to attend the sessions mentioned above. You mentioned that this won't be the last time you will teach a group of students. For this reason I would like to also become a tutor or even help out once I am done with learning from the sessions. I've always been the type of person that gives to community in forms of free downloads, tutorials, or even member contests. Thanks for considering my application and good luck to everyone else who applies.

Infinity. - August 28, 2015, 4:38 pm

Hi, I've been meaning to give my CCNA in the upcoming months and so far I've covered the first 2 topics that you've listed in your thread (I've been watching his videos <https://www.youtube.com/playlist?list=PLmdYg02XJt6QRQfYjyQcMPfS3mrSnFbRC>). Hopefully I get accepted for the further nourishment on the subject provided by you. I am really really interested in mathematical techniques in networking and Network security.

Goodluck to everyone who applies for this. :)

taichou - August 28, 2015, 6:03 pm

A little about me:

soon to be uni grad in comp sci, that has moved interests from software dev to security and cloud services.

I'd love to get into conversations with like minded individuals .. (have access with some servers i am learning on hosting company i worked with)

maybe i can even give a tutorial one day or a case study on a setup i will do.

Thanks

This application is exactly what I'm looking for. You have been accepted as a student and I'll be in touch with some more information in due course.

I haven't checked through the other applications (both before and after this one) so don't worry, this particular application just stood out.

Meow - August 29, 2015, 12:28 am

I'm interested in this. ?

Velocity™ - August 29, 2015, 12:33 am

I would be obliged to take this opportunity as I have taken interest in this area of study for some while now but it never seem to have gotten enough to me for it to be put to action.

With my decent knowledge of the above topics listed, I believe I could take what has been taught to me and expand my search to re-create newer and better things along with more teachings all in Null's name.

Thank you. :)

Scar . - August 29, 2015, 8:33 am

Thank you for accepting me

HIGH PAID FELLA - August 29, 2015, 1:45 pm

Hello, I'm Asterea and I am really interested in the following topics:

Malware analysisAnalysing_malware_

Working of_malware_

C&C communication

Reverse Engineering

Programming (low-level & scripting)Python

ASM

C/++

Shellcode creation

Networking & exploitation

General InfoSec

Wi-Fi hacking & phreakingusing a SAMSUNG Galaxy Tab 4

Raspberry Pi('s)

A Pineapple WiFi

Networking is an important topic to know regarding my interests as you can see above, I'm willing to spend a lot of time learning them. I have been reading books recently and hope this class will help me with the networking part.

Cheers.

P.S. I have made a couple of contributions towards the community, if you wish I could you link you them.

Avunit? - August 30, 2015, 11:14 am

Nice application, you've got yourself a place on the course. I'll be in touch.

Aur3xis - August 30, 2015, 5:17 pm

Didn't see your edit to delete graphics earlier, did it now though.

Sorry for late edit.

Dorrance - August 30, 2015, 9:26 pm

About Meh:

Hi, to whom is reading this I am a 17 & a senior in high school, who would love to go to school to be either a Lawyer or a Network Analyst. I am a competitive gamer but not so much as school is back in basketball season is coming up. I can be reliable on many scale levels and I like the role of taking leadership to get the job done during task.

Why I would love to be accepted:

I feel as if I join this program I could learn a lot to put towards my learning on computers more. Which from this experience if I am accepted I could use if I ever to decide to go to college next year for computers and networking. I have the free time during the week to learn I just need a teacher and it's free of charge, I can give 100% I will be dedicated since its on others time to teach. This could be an actual career I love which I could use to earn cash doing so and mentoring after

becoming a veteran.

Rokushi - August 31, 2015, 4:25 pm

Daddy Zer I appreciate your contribution bro :) and thankful (kissy face) also good luck to all the other people applying.. few spots left

Syntax_Free - August 31, 2015, 6:16 pm

I'd love the opportunity to learn about networking/security! I'm actually looking to prepare myself so that I may land my first IT job.

About me: I've studied a bit with SecHub (recently got kicked for inactivity due to personal life), but I'm trying to get back in now that I am settling back down. I started learning about coding because I wanted to become a game developer, but I quickly started branching off into other fields of study such as web development. I'm not the best on this forum by any means, but I am looking to find a field in technology that suits me best, so I'd love to give this a shot.!

What I know so far: Basic HTML/CSS, Programming logic (loops, data types, etc.), dabbled in, but not yet proficient in Ruby, Python, C++, Java, and JavaScript.

Even if I don't get picked, it is nice to see the community helping each other out. Thank you HF, for being so awesome!

Yakz - September 1, 2015, 2:27 am

Who am I?

I'm Jonas, 19 years old and currently reside in Belgium. I'm a friendly, easy going person and very interested in learning.

Lately I have been lacking in learning Hackforums related topics since I had decided to spend all my time on improving my French and starting German but when I had seen this thread I just felt like I had to do this for some reason. I'm sure this course will be an educational program and help me along the way when I wish to continue network related studies after this.

Information.

Since I joined HF I always had a passion for learning all the various topics that are discussed on this forum, I always noticed when it came to networking related things I sometimes had a hard time grasping how it exactly works, I feel this was mostly due to me not understanding English entirely back then so a lot of times when I did not understand something it was due to certain terms being used that I didn't understand.

I had a few chances to Join a courses like this but I was always hesitant due to not wanting to be a nuisance because I didn't understand/spoke decent English. Since my English improved dramatically over the years I feel I'm more confident and having a much better time on HF. So I think now it's the perfect time to make the decision and apply for a program like this one.

I think I already have a decent understanding of certain network related topics but I'm a 100% sure that this is far from what i should know. I feel like this course would be the perfect opportunity for me to finally learn the ins and outs of networking.

Lately I have a lot of free time on my hands because I took a long vacation from work by forfeiting

all my overtime so I'm definitely interesting in spending this time in a useful way instead of wasting my time.

I can assure that I will have respect for the teacher and attend to every scheduled session If i'm allowed to participate in this program.

End word.

I see this as a new challenge/adventure and there's nothing more I like than learning and experiencing new things. it would be an honor if I get accepted in this program.

It's really amazing you guys offer this, I'm not sure where i would be able to follow a course like this other than following written info and self study, Belgium doesn't really offer much network related classes in the area I live.

Thanks for your time, reading this post.

Warm regards, Yakz.

Really nice application Yakz, I'll be in touch shortly with some more information about the sessions. Your written English seems perfect but if you have any trouble understanding the spoken English in the sessions just let me know and we can work something out, whether that means going over things again privately or whatever I don't mind.

Bald lets just face it, your dumb and your profile literally screams multi.

regexks_ - September 4, 2015, 11:36 pm

I'm a Computer Information Systems major with four years of Cisco networking experience. I've had my CompTIA Network+ and Security+ for almost two years now and I'm also a Cisco CCENT. I'm looking into my CCNA within the next 60 days. Although some of what you're going over would be a review for me I think there's plenty of information I can be sure will help me widen my scope of knowledge.

Thanks and hope to hear from you soon.

Viktory - September 5, 2015, 12:31 am

Hello, I'd like to apply and pick up on some concepts that may have flown over my head.

Thanks zer =]

Avunit? - September 5, 2015, 3:06 am

It would be a pleasure to have you on the course! I'll be in touch shortly.

ExistenceRedefined - September 5, 2015, 3:11 am

If this is still available I would like to take part as I was an IT Technician for a company not long ago and it required networking knowledge that I knew very little on. I am willing to work hard and study as I am a student anyway.

It would be fun to learn this and very useful indeed.

Avunit? - September 5, 2015, 9:01 am

I'll consider your application!

SIM-1984933 - September 5, 2015, 6:43 pm

I enjoy learning anything i can about computers.

I'm willing to work hard and try my best i plan to make this my occupation one day.

I'm willing to teach and help what i am taught to the community.

thanks in advance.

I'll add your application to the pile to look through tomorrow.

lenaos - September 5, 2015, 8:48 pm

I don't really know much about Networking nor Network Security. I've sat on the sidelines thinking it was rather complicated--too "hard" for me per say. Besides my minimal amount of expertise, Networking has always been an interesting topic I've always understood as being a intriguing thing to learn when I had the chance to do so. Most of my activity on HackForums resides in the graphics sub-section, therefore I can't provide any tutorials/contributions that pertain to any sort of Networking. Dis-regarding that, I put my full effort into something I'm involved in. If I was to be accepted into this course I can guarantee I would try.

If this course is not for bare beginners please inform me, thanks.

I'd be happy to have you on the course, I'll be in touch with more information soon.

I'll wait for a few more applications then decide who gets the final few places.

Grievous????? - September 6, 2015, 9:11 am

I don't know much about Networking myself, but this course seems like a great opportunity for me to expand my knowledge on the topic.

I'm a dedicated person with some free time on my hands, so I would love to enroll in a Network Security course.

As you can see from my profile I'm not one who posts in networking sections a lot, but because I'd like to go into the IT line after I finish school I think it would be a good opportunity to get ahead of the crowd and have an early start.

Avunit? - September 6, 2015, 12:13 pm

And thanks ?

Hinch - September 6, 2015, 1:33 pm

I think i should put this here as avunit is a skilled member i am in this group its well worth it.

@NEGRO - September 6, 2015, 2:12 pm

there is no point having all of nulls buyins join fill up the 15 spots. I want in...

Avunit? - September 6, 2015, 2:21 pm

(Sep 6, 2015 02:12 PM)Shield???? Wrote: [\[CITE\]](#) there is no point having all of nulls buyins join fill up the 15 spots. I want in...

The Null students that are partaking in this course don't count towards the 15 places. Just because you are, in my personal opinion, the worst person in the world I'm going to let you in. I'll be in touch soon.

I want another 3 months of summer break

fuck outta here,only real hackers can be in this program.

Froggy - September 6, 2015, 3:19 pm

My name is Isabella, I'm 20 years old, and I'm currently studying Information Technology with a focus on Networking in College. I took various CCNA Networking courses in High School, but I really need a refresher before I begin my Bachelors program. I also have the CIW Network Technology Associate certification. I'm available any time after 6 PM EST. I currently work as a QA tester for a mobile game development company, which is a foot in the door for my career aspirations. I work hard at what I put my mind to, and I'm willing to assist with future iterations of the course. I'm interested in applying what I learn to the real world.

I'm also currently taking a System Analysis and Design course (in College), and I'd love to work with you on adapting it to another community program.

It would be great to have you on the course! We'll discuss peoples availability once the group is all together to try and figure out a schedule that suits everybody. I'm already creating some other community programs related to networking and it'd be nice to have your input on those as well as adapting any other program ideas you may have. I'll be in touch shortly with some more information!

Vouch for Froggy. I've known her a long time IRL and know she has a great understanding of a multitude of subjects (I would know, I taught her everything she knows! LOL, JK). She's taken the same Cisco Networking Courses I have and we had the pleasure to work with each other for several years and she has always strived above and beyond to excel in everything she did.

I think this will be an amazing time for all of us ?

Lmao regexks ur so funny to stalk

Reformer - September 7, 2015, 12:23 am

Hello there, I would really be delighted to start learning networking and security as I have recently gotten really interested in programming/ other components of computers/technology. I am currently in high school and looking to expand my knowledge rather than just wait until college to learn real stuff. The problem is I can't really get into the advanced programming classes that are offered in my school this year(which is a real bummer), but I decided that I wasn't going to wait until next year when I could just start this year. As I stated before I picked up programming and have a basic understanding of the concept and am now looking to expand that knowledge by learning about things outside of programming that could really be helpful. If I were to be selected to be one of the lucky few to join, then I can assure you that i would put in a 110% effort to learn all that is being offered and after the course is over I would use the knowledge I have gained from it to benefit not just me but other people around me. Thanks for reading and I sincerely hope that I make it :).

SIM-2015410 - *September 9, 2015, 12:01 am*

What level of detail do you cover in these sessions? I am really interested, but I am quite busy so I probably won't apply. I would actually really appreciate it if instead you could point me at a self study resource (e.g. a specific book) that would give me the same level of detail but that I could read whenever I have time so I don't waste yours.

Maxiim - *September 11, 2015, 3:45 am*

Great opportunity for people.

Networking is an important topic, whether you are a developer or a hacker.

Should be in a toolbelt of every person who has an interest in computers/tech.

Froggy - *September 12, 2015, 1:09 pm*

When is this beginning? Looking forward to it. ?

Avunit? - *September 29, 2015, 11:11 am*

Made my final decisions on the students. Sending out PM's tonight - thanks to everybody who applied.
