Thread: [Slot Machine help](#)

Real Astra - August 27, 2015, 2:10 pm

I am looking for someone to code me a basic 3 wheel slot machine, I've tried to do it but I have no idea how to even start.

Thank you

Have three text boxes, each box allows one char.

Have a random generator make a char/number for each textbox.

Compare the content of the textbox's.

Your post sounds pretty much like "I want a slot machine and I don't have the motivation or care to do any research or work myself, so plz write for me". We have a saying at Stackoverflow that goes pretty much like this:

whathaveyoutried.com

Putting that aside, I came across this fiddle a while back that was interesting and could be used to create a cool slot effect pretty easily (in html5 mind you)

jsfiddle.net/DnTX6/

You should check it out. Some of the same principles can be translated into WPF Storyboards and transitions.
