Thread: [Playing with fire and high exposure + HOW TO!](#)

Dexter. - *August 29, 2015, 10:03 am*

Hey guys me and some friends found this awesome thing you can do!

Items Needed:

Steel Wool

Wisk

Sting (to tie around wisk)

Lighter

Camera (duh)

Nighttime ?

How to:

Stuff your steel wool (normally 1 patch) in your wisk.

Light you steel wool

Spin the wisk (for 30 Seconds)

Camera Settings:

High Exposure for 30 Seconds

Results: (Shrunk down images for you guys!)

[Edited myself spinning in the background out]

Shot With a, Cannon EOS Rebel T3 Black EF-S 18-55mm

You're welcome! Go Try it! Post your results too!

Me and my buddies are going out tonight and doing it again I will post the results tomorrow! ?

Those are EPIC shots! I will keep those settings in mind when shooting fire!

Focusal - *September 6, 2015, 10:55 pm*

Not bad. Personally I wouldnt do 30 seconds unless you plan on doing something fancy. I normally keep mine at around 15-25 seconds.

Here are some of mine I did awhile back. All of them except the last was more than 30 seconds long. The 2nd one I did at 55 seconds. So you got to play around. All 1 image.

MAKE SURE YOU HAVE SOMETHING TO TAKE OUT FIRE. Best to do after rains. It can cause fire
