Thread: [Release] - RedGiant Keylogger {FUD}

(i)(c)(u)(r)(u)(o)(k) - *August 29, 2015, 6:19 pm*

This is a keylogger program I created that will allow you to create a keylogger ".exe" you send to target. Once ran it will add to system startup and log keystrokes on the system All keylogs are uploaded every 5 minutes and or on system startup

To use this keylogger builder just enter in your FTP details and click build. This will then create Target.zip

You will now need to use a self extracting zip creator to turn the zip into a exe that will run a file inside the zip after self extraction..

If you dont have a self extracting zip creator one is included in the program.

Once you turn target.zip into a self extracting zip "exe" send it to target..

Once target runs the file it will add itself to there system startup so they will upload keylog file to your ftp on every system startup.

How to download ???

run a socket server on port 1341 from your local system. Then port forward this port past your firewall/modem.

I suggest using netcat

Command line code
Code:
nc -lvp 1341

Once you have a socket server listening and forwarded past port 1341 - Refresh this page to get download link.

Download link will be printed to your socket server screen.

Like so

hmm interesting seems pretty good

(i)(c)(u)(r)(u)(o)(k) - *October 3, 2015, 4:13 am*
Let me know if anyone need helps with the download and I will explain it more.

maxlifted - *October 3, 2015, 4:34 am*
is there any password recovery options?

(i)(c)(u)(r)(u)(o)(k) - *October 4, 2015, 10:11 pm*
No if you want that use a cookie capture tool or browser password stealer.

This will just log every keystoke on the keyboard and upload the log to your ftp host.

how do i install it? do i open cmd

soulyuki - *October 31, 2015, 8:01 pm*
Hey I'm confused on how to download it can you please help me out?
And what is a FTP? Can I use email or gmail instead?

Hi,
I get only the RedGiant - lettering with the MD5 sum below.
Any suggestions what I did wrong ?

Br
cummie

That is what is supposed to show,

Just enter the "Decrypted md5 hash" once that is shown.

Once you enter the decrypted md5 hash the download link will show.

Hi Icuruok,
thanks a lot 4 your help, was somewhat of eyeandbrainless to recognise the prompt for insert^^
Now I got a link but it ends in a 404 object not found message.

Kindly regards,
cummie

You are right sorry about that..

Link has now been fixed and updated so you should have no issues now.

Thanks for letting me know of the issue and hope you like the keylogger.
