What's DESKBOT?

DESKBOT is a very easy-to-use skypebot, designed to run on desktop pcs. It has all the functions a normal user needs.

What features does it have?

Auto-Reply to:

[?] New Friend Requests

[?] New Messages

[?] Incoming Calls

SCREENSHOTS

To install/update XENOT-DESKBOT you need to use our HUB. After the installation you can modify your settings. There you can select when and how the bot should react to certain events.

The bot can react to New Friend Requests, New Messages, Incoming Calls.

If you want to start you bot, you need to start the Daemon. This can be done in the "Daemon"-Tab. There sou can start/stop the bot, add it to autostart or view the logs.

In the "Daemon"-Tab you can find the logs as well. In case of a problem you can find the error-report in the logs.

I cant seem to get the auto reply to work

XENOTpro - August 31, 2015, 4:30 am

Updated the bot, there was an error with the configuration file. Everything is fixed now. :)

Sites getting DDoSed I think ;(

XENOTpro - September 10, 2015, 4:23 am

No, I maintained the server. XENOT.net has 3 layers of ddos firewalls at the moment, so that shouldn't be a problem.

XENOTpro - September 28, 2015, 10:13 pm

Sorry but it seems like you doxed the wrong person. This tool isn't infected with anything. But please, please think about what you're posting first.

Btw. how can't you find out my real name? There are at least 2 portfolios out there. Skid.

You're so nice! I'm gonna test!

Vitani - October 15, 2015, 7:11 am

Looks pretty slick, I will definitely try this out soon. Good work on the GUI Op!
