You could always go to a different site or make your own.

I think he means he wants a skin that works well with the skin derp mod that can be found in some clients.

Skin derp toggles the different parts of your skin on and off. For example if you have a hat layer on your skin it will quickly turn it on and off. This goes for all layers that your have on your skin.

wouldn't be hard to make a skin with a white skin and black on the outer part, that would look pretty good.

Make one with different colors for each layer, V1olet had a good one before, but I think he changed it.
