It does look similar but that's like any two similar products such as Instagram Turboers, League of Legends crackers, etc. having the same GUI. Not much you can do with the GUI to make it look different from others besides changing the colors.

No point of selling this awesome bot if I release the source so no, nice try. I have no problem if you think I copied his source. That's your opinion.

Still loving the bot. I've got a few methods that have been working with the bot but one will not work without a lot of effort.

My suggestion: Make a betting method where you can set a "starting" bet and then it will bet your winnings (Only the profit) from before. If you lose, it'll stop the bot.

Don't know if there's a strategy to this. so far -\$1

edit: what in the fuck, was at 10k profit, then the bot decided to bet my ENTIRE balance and then say "setting issue"
that's nice.

edit2: put another \$5 was doing well (+2000) or so, went afk for 2 minutes, come back to a -10000

balance. it lost 3 in a row.

what strat should I be using.

so far I'm -\$18

like it works nice until it loses 4 in a row, like I don't even do that when I'm not trying.

edit3: aaaand it just ate my balance. \$0 remaining. lost 7 in a row.

edit4: trying one last method to run while I sleep, hopefully this changes everything.

Secret Agent - September 20, 2015, 7:23 am

Please note that no Satoshi Mines bot including this one increase your chances of winning. It is all random and luck based :) Bots does the work for you of playing the game based on your customization while you sleep or do something else.

Expels - September 20, 2015, 9:37 am

Well, the bot randomly betting, and using my choice. Has made me 0 money. I'm -\$22 (10 for the bot, 12 bet)

infact, I was trying out the "bet while you sleep" feature. Had \$5, went to bed. Went through the logs and I started the bot at 3:14am and I ran out of money at 3:16am...

Is there a refund option? This bot is doing nothing the thread says. It's not ultra stable either, it ran into "some error" and bet my entire fucking balance in one go.

Well if you bet 1,000 bits, you lose much more and much faster than what you gain.. and you will run out very quickly especially if you only have a balance of 7,000 bits. Lower how much you bet because it's not common sense to bet 1,000 out of your 7,000 balance. Because of this, you probably thought the bot bet all your balance at once because you lost all your bits so fast. Betting all of one's balance randomly has never happened to any of my testings (which I perform every day) and also to any of my purchasers.

It's all luck and random based so losing 4 times in a row and saying "I don't even do that when I'm

not trying" makes no sense. There is no strategy you can use that'll make your chances of winning higher. Requesting a refund because you keep losing a lot of bits (due to you mindlessly bet 1,000 bits out of your 7,000 balance) won't be considered. We only refund for software problems that we can't fix.

Here's a suggestion: Lower the amount of bits you bet.

I've reviewed my code multiple times and through the way it's designed, it is not possible for the bot to bet all at once (unless you specifically customize it to bet all at once). You only receive an error when you don't have enough bits to bet the minimum required bits. And like I said again.., the bot does not improve your chance of winning. You could get 5 straight wins in a row, you could get 5 straight loss in a row. It's all random.. One mine does not have a higher percentage of being bombed than the others.

I think i know why you lost all your money. There is a huge problem with bit rotation. It considers the "go over amount" as the bid amount as well. For example if you put (if i go over 15000 change bet to 1000) it will still save as (if i go over 15000 change bet to 15000). Please fix this issue asap. I lost 15000 bits due to this. Also can you add a rule for "If i go below xxx change bet to xxx".

when i select strategy it chooses its own order for those blocks and does it exactly the same way every single time instead of selecting random blocks from those bunch of selected blocks. Doing what bot is doing causes huge loss if it keeps going the same way every time.

How does it cause a loss if the strategy you set is going the same way every time? It's all equal chance of winning/losing.

Pretend you chose your strategy to be on tiles 1,2,3. It doesn't matter which tiles the bot selects first, second, or third because if there was a bomb in either 1,2,3 you are going to lose the amount of bits you would have gained if there was no bomb.

Is the strategy only meant to select # of blocks as we want to play? i thought we could select 10 blocks and the bot will randomly select 3 from those 10 blocks every time.

Strategy is when you select the tile you want the bot to select. If no strategy is set, the bot randomly selects a tile.

I have added a new setting called "Multiply Bet On Loss Until Win".

Example: If you enabled Multiply Bet On Loss Until Win and set it as 200% and you lost 30 bits, the amount to bits to bet on the next game will be 60 bits ($30 \times 200\% = 60$ bits). If you lost that game also, the amount to bits to bet on the next game will be 120 bits ($60 \times 200\% = 120$ bits). This will go on until you win.

Just bought this, everything was fine. Then i ended up loosing everything due to a bug.

Bit rotation is not working for me, what ever I input the amount to bet always end up beeing set to the same value as "if balance is over bits" value. So ended up betting a ton more than i wanted. The things I input is showed until I save the settings and reopen them. Then they get set to the same values. Please fix.

Lucky I only played with low money.

You can open multiple windows which allows you to customize each game differently.

It would be less memory usage if you added the feature into the bot rather than opening a new process for each additional game.

It only uses ~17MB memory per window which is nothing. Because the memory usage is so small, you can run it on pretty much any computer regardless of specifications.

Hello recently started using it and so far I have been able to earn some money in a day (used small starting sum and small bets, so no crazy amount).

I have a feature requests:

1. would it be posible to add a box to the "multiply bet on loss until winning " so that it multiplays a maximum amount of time and than resets to the starting bet?

Here are some bug-reports

Also is it posible to implement a better check/error measage if you try and bet more than you have all it shows are "An error occured... "

I also get a crash trying to use the deposit function in the app, it crashes as soon as i press "I have deposited" not a big deal as I can still deposit from the browser, but still anoying.

May I ask what kind of 'strategy' you (or anyone who already bought this) would recommend ?

Because when you play 100% random your chances of earning are actually quite low. And as you have a lot of positive vouches, and people who say they already earned quite well, I'd like to know how.

I'm just a very cautious guy^^

This bot doesn't increase your chances of winning nor it decrease your chances of winning. This bot just plays the games for you based on your specification. I have no strategy since I do not gamble for a living. You can ask the people who vouched since they are actual users of the bot.

Man i hate this made me loose 50k satoshi due to bots fault ...

So i had a strategy set and stop after certain loses to avoid big loses , strategy was 6 clicks on 1 mine then 6x , so i lost 8k then it stopped so i clicked start to start again and it started with 48 k ...
fucking hell and then i clicked stop but it kept going and rip me

The strategy feature is the feature where you can choose which boxes you want the bot to choose. You asked for the safest setting and the default setting it comes with is the safest. What you are asking for is the best setting but I do not gamble for a living so I do not know any good settings. You can ask the people who vouched in this thread since they are real users.

bought this waiting for it now

uTrip - January 2, 2018, 8:32 pm

Bought this a long time ago. Made ALOT of bitcoin back then with this. I never left it on Auto Pilot but rather in the background.

Just note that its gambling for you, Gambling is the keyword.

However unlike humans it sticks to pure mathmatics and is not emotional.

This alone DOES increase your likely hood of making cash, it removes the human error.

Way I see it you either win a little or lose a lot, more you play the higher chances you lose everything.

It's not about how many squares there are and the chances you click a bomb, it's the fact you have to bet around 10x what you would earn in 1 round, so after 10 attempts of gaining a tiny bit, your chances of losing everything are very high.
