Thread: [Wifi Hacking Noob to wifi hacking](#)

DoctorWho4563 - September 1, 2015, 11:43 pm

i don't need someone to hold my hand hear but just some help in the right direction

when i try to google for info it is a sea of crap cant find anything useful

and looking at the sticky I had no clue where to start

i.imgur.com a6yEikO.png

this seemed like a good place to start considering i cant find any info on the network like i could in windows 7

Mad76e - September 1, 2015, 11:50 pm

Windows is NOT a WiFi hackerfrindly OS, unless you use a VM, it's going to be hard.

if i make the pic bigger you would see 3-4 vm running XD

i got kali-linux already if i need something else just let me know or give me a guide or something figured it out

i was close to doing it correctly before posting

they had auto channel changer on? took a while before i could do it in one shot

Yes, you will need something else. You will need a compatible Wireless adapter. I'd suggest buying the Alfa awus036h or awus036nha

i have one

but in the channel they where using kept on changing and that was the issue

Frosteh - September 3, 2015, 12:59 am

Just be careful with VMs, you'll need a wifi card that supports promiscuous mode and packet injection, typically people buy USB supported devices, some people have issues with using USB devices in VMs, they don't always work like they should, it would be easier to make a bootable USB

key and put Kali linux on that and then boot from that.

If you're getting channel hopping with the wifi and you're running something like the aircrack-ng suite of tools, it's because you've run something like airodump with no specified channel which means it rapidly switches channel to scan the entire band, either supply a specific channel or stop that running when using other tools which require a specific channel.

EgoETEK - September 15, 2015, 7:48 am

im using windows all the day ..
but using LIVE CD for cracking some wifi :)

globsimon - November 23, 2015, 1:13 pm

Hi, I dont need to hack the wifi as he's given me the password. My neighbour has let me use his wifi just wondering what I need to buy to boost the signal so it will reach my living room. I want to do it just from my end as he will probably think im cheeky asking him to plug something into his router. what device will I need

flash1 - December 3, 2015, 4:44 pm

Buy a yaggi antenna online and you can pull signal from kilometers away under the right conditions.

Accessory - December 3, 2015, 4:45 pm

Kali is your best bet for Wi-Fi hacking sir.

abcdem - September 10, 2024, 12:42 pm

A question just to hack a WIFI network in my area do I need a monitor like ALFA or can I use Linux Kali commands or something?

Thank you very much

luddite - September 10, 2024, 2:37 pm

since you have permission you could use an AP that has a repeater mode or flash one with DDWRT. place in a window nearest to them.

DramaKing - September 11, 2024, 6:01 am

It's not an either/or. Now you might find a WAP somewhere in your area that has vulnerable WPS, but I wouldn't count on it. It's better to capture a WPA2 handshake with using monitor mode and crack the hash with a powerful GPU.

how to crack the hash with gpu

DramaKing - November 26, 2025, 4:03 pm

(Nov 26, 2025 04:31 PM)ze_zo02 Wrote: [\[CITE\]](#) how to crack the hash with gpu

First, you have to have a GPU and a mode 22000 hash. Then you download hashcat and a wordlist.
