Thread: [Simple PHP Skype Resolver API System](#)

BLOW. - September 2, 2015, 10:15 am

Hi,

Today i have created this for my friend:

PHP Code

```
<?php
```

```
/* Simple API SYSTEM  
   devSpyce. */
```

```
# CONFIGURATION  
$APILink = "yourapi";  
$keys = array('devSpyce', 'HF');
```

```
#REQUIRE  
$skype = @$_GET['skype'];  
$keyget = @$_GET['key'];
```

```
#SCRIPT  
if(in_array($keyget, $keys)) {
```

```
    if(empty($skype)) {
```

```
        die("You must input skype username");
```

```
    } else {
```

```
        $ch = curl_init();  
        curl_setopt($ch, CURLOPT_URL, $APILink);  
        curl_setopt($ch, CURLOPT_HEADER, 0);  
        curl_setopt($ch, CURLOPT_NOSIGNAL, 1);  
        curl_setopt($ch, CURLOPT_RETURNTRANSFER, 1);  
        curl_setopt($ch, CURLOPT_TIMEOUT, 3);
```

```
        $result = curl_exec($ch);
```

```
        curl_close($ch);
```

```
        echo 'Result : ', $result;
```

```
    }
```

```
} else { die("Key is not valide"); }
```

?>

Support : PHP5, cURL

Credits : devSpyce

?

stackoverflowin - September 2, 2015, 10:50 am

A few things that need fixed here / tidied up a bit.. Other than that, nice job!

PHP Code

```
<?php
# Config
$apiLink = "yourapi";
$keys = ['devSpyce', 'HF'];
# Start
if(isset($_GET['skype']) && isset($_GET['key']) && !empty($_GET['skype']))
{
    # Check key
    if(!in_array($_GET['key'], $keys)) {
        exit('Key is not valid');
    }
    # cURL request
    try {
        $ch = curl_init();
        curl_setopt($ch, CURLOPT_URL, $apiLink);
        curl_setopt($ch, CURLOPT_HEADER, 0);
        curl_setopt($ch, CURLOPT_NOSIGNAL, 1);
        curl_setopt($ch, CURLOPT_RETURNTRANSFER, 1);
        curl_setopt($ch, CURLOPT_TIMEOUT, 3);
        $result = curl_exec($ch);
        curl_close($ch);
        # Result
        echo $result;
    } catch (Exception $e) {
        echo "Error - ".$e;
    }
} else {
    exit('Error - Parameters missing!');
}
```

    # Result
    echo $result;
} catch (Exception $e) {
    echo "Error - ".$e;
}
} else {
    exit('Error - Parameters missing!');
}

```

Oh ok, thanks nice edit ? ?
good job man

Woitzzy - September 2, 2015, 2:48 pm

Thanks for sharing this man ?

Kensa10 - September 7, 2015, 12:10 pm

What i need to put in the api?

PM me please.

PM me please.

You need an API that has a Skype resolve script built into it.

Example: <http://127.0.0.1/resolve.php?username=theirusername>

Your best bet if you don't know how to make one of those is to purchase one from one of the major Skype resolver sites you can find on Google.

the api haha, here are some good ones:

api. c99. nl

stackoverflowin - September 7, 2015, 4:00 pm

I've uploaded the script to Pastr for you to look at also: <http://pastr.me/!dfwckut>

xADHDx - September 7, 2015, 4:10 pm

Great work in putting this script together! If this is your first attempt at a Skype Resolver API its a great start.

No, its horrible. They're are 1,000 of these posted here, and people just say "Good job" to boost there posts.

How about you make something like this, but upgraded.

E.gKeys in a database

Purchase API

Limits per free keys for an IP

So much stuff you could do that would be useful instead of the same script that nobody with a brain would use because its pretty fucking pointless

Remix - September 8, 2015, 11:48 am

Never never never never never never nerver use @

RumbleFrog - September 8, 2015, 6:34 pm

I could see people making API using API then sell their API claiming it's their own lol

BLOW. - September 11, 2015, 9:41 am

Hey, people can making API using he's own API bro because he can resell he's API i don't know but is verry used in skype duplicater API.

Sorry for my english. ?
