Thread: [Welcome to Visual Basic :: A complete, updated compilation of Tutorials and Releases](#)

King of Hearts - September 4, 2015, 8:13 pm

Hello,

As some of you may know, I recently created a [mega compilation](#) of all the Java source codes and tutorials released in the past. One thing that I learned from going through that was that there were many high quality tutorials, source code releases and snippets that were ignored. Seeing that, I decided to make another compilation for the VB .NET section. Now, I know that I don't visit this section often, however, this was one of my early languages that I learned and this section is probably the most popular Coding section. I am making this thread to help others as I've been helped countless times when I first started on this forum. I did not go through each and every tutorial and source code to ensure that it was properly coded, proper coding paradigms were followed, etc. If you feel that a thread should be removed from this list, please let me know why you think so.

If you feel a thread needs to be added to this list, please fill out [this form](#) and reply to this thread. I've tried to include as many as I can and will continue to update this thread. If you feel that I missed something, feel free to contribute.

Oh and by the way, threads are supposed to be listed in reverse chronological order based on last reply as of 9/4/15. However, I may have misplaced a couple of threads due to moving things around. I apologize for that.

Thanks,
Saad

Table of Contents

[Tutorials](#)

These are all the tutorials that have been posted by members over the past 200 pages

Code Releases

These are all the code releases, snippets and github projects that have been posted by members over the past 200 pages

[Part 1](#)

[Part 2](#)

[Part 3](#)

[Part 4](#)

[Part 5](#)

[Part 6](#)

[Theme Threads](#) These are all the threads and code releases relating to the .NET themes

[What To Do Next?](#) Great you've glanced over this thread. Now how can you make this subforum much easier to use and navigate.

King of Hearts - September 4, 2015, 8:32 pm

If you are an experienced developer:Please try to help others to the best of your ability and try to be patient.

Before making a tutorial, take a look at the tutorials that have been already made. You might be better off creating something unique (and maybe you'll learn something new in the process).

If you are an new programmer looking for help:Please take a look at the tutorials and source codes released before making a new thread asking for an explanation of a topic already explained multiple times previously.

Try to include relevant code in [code] tags to help us better read and understand your code.

Going on top that using [code] tags, include comments. This will help us understand your thought process.

If you wish to add more items to this list, please fill out the following form and reply to this thread. I will try my best to keep this as updated as I can, but I may miss something. Also, I'm thinking of adding an external resources section to this. However, I don't have many, so please comment with those also.PHP Code

Nice i have been following these tuts for some time now.

VmX5 - September 6, 2015, 10:41 am

Nice! This must have taken you along time to get together! My name is in it ;3

SaketSaket - September 6, 2015, 11:16 am

Nice compilation of all important threads... Thanks...

King of Hearts - September 7, 2015, 10:13 am

I'm glad you guys have found this interesting. I'm trying to keep this as up to date as possible, so please once a tutorial/snippet is released, please post here so I can add it to the list.

I just added:

[\[Tutorial\] How to create a Simple Stopwatch](#) by [VirusCrafter5](#)

YaBoii - September 7, 2015, 11:29 am

Correct me if Im wrong but you should capitalize the first letter of a function.

King of Hearts - September 7, 2015, 11:38 am

(Sep 7, 2015 11:29 AM)YaBoii Wrote: [\[CITE\]](#) Correct me if Im wrong but you should capitalize the first letter of a function.

According to the VB .NET conventions, yes. Meh, I usually code in Java so I'm used to the other convention. I'll update the graphics when I get home.

untrusted - September 8, 2015, 5:54 am

Bookmarked this, Look like it will help me a lot.
Thanks for being so sexy!

Vector.A+ - September 9, 2015, 1:32 am

Good Job my friend thanks a lot

Adderall - September 9, 2015, 6:36 am

How much time have you spend on making this thread? ?
Still a nice thread for some people.

tweety - September 9, 2015, 11:34 am

Not sure why my post got deleted, I'll say it again;
This is a useless thread.

ZeroOne - September 9, 2015, 11:40 am

I just bookmarked this thread for future reference.

Thank you so much for taking the time to make this thread and hopefully it will stop a lot of forums spam on questions like "Where do I start with VB?".

King of Hearts - September 9, 2015, 12:22 pm

(Sep 9, 2015 11:34 AM)Tweety. Wrote: [\[CITE\]](#) Not sure why my post got deleted, I'll say it again;
This is a useless thread.
Hmm...Why would you say that?

tweety - September 9, 2015, 12:54 pm

(Sep 9, 2015 12:22 PM)King of Hearts Wrote: [\[CITE\]](#) Hmm...Why would you say that?
Because people can use the search function instead, or better yet Google? Are you saying your thread won't be in page 5 in 3 days time, dead?
Omni will be upgrading the forum to the latest mybb which support searching with prefix. Your thread isn't very beneficial to the forum.

King of Hearts - September 9, 2015, 5:59 pm

(Sep 9, 2015 12:54 PM)Tweety. Wrote: [\[CITE\]](#) Because people can use the search function instead, or better yet Google? Are you saying your thread won't be in page 5 in 3 days time, dead?
Omni will be upgrading the forum to the latest mybb which support searching with prefix. Your thread isn't very beneficial to the forum.
When Omni upgrades. Until then, I've found some decent tutorials that fell back. I know that this won't be in page 5 because I will be posting updates and such. Search function? Google? Have you ever visited this thread? People think it's much easier to make a new thread then visit google or use the search function. Hopefully, if this is the first thread they see, they may click on this first and ctrl + f, which is much better than sorting through google or waiting 30 seconds for the flood limit. With that being said, even if people continue to post help threads, that's fine.

My main goal for this thread is to compile other user's contributions that have been forgotten/dead. With the creation of this thread, all releases are centralized so users who are bored or don't know what to do can (as I know some have done) come here and look for projects and try to emulate them or learn something new by reviewing the code.

People, generally, prefer having to avoid search pages or having extra steps to find something.

With this thread, they can find multiple different items in one place, one thread, same page. You might not agree with this, and I respect that. But please do not post on my thread.

Russ. - September 12, 2015, 1:53 pm

Put alot of effort into this, good work! Thanks for the nice release!

It is a lot more simple, so it gives you a start into what programming is like & gives you a feel for the framework. However, once you master VB, I would suggest you move onto a more complex language like Python or Java.

Odus - October 27, 2015, 1:46 am

(Oct 27, 2015 12:30 AM)Earn Wrote: [\[CITE\]](#) It is a lot more simple, so it gives you a start into what programming is like & gives you a feel for the framework. However, once you master VB, I would suggest you move onto a more complex language like Python or Java.

Complex how?

Earn - October 27, 2015, 4:18 am

(Oct 27, 2015 01:46 AM)Odus Wrote: [\[CITE\]](#) Complex how?

It is many people's belief that languages such as Python & Java are more complex than Visual Basic. Visual Basic's syntax is much more easier for beginners to understand, hence the "Basic" in the name. This isn't everyone's opinion however. Many people find other language's syntax easier to understand. It is a matter of preference to be honest.

Odus - October 27, 2015, 4:55 am

(Oct 27, 2015 04:18 AM)Earn Wrote: [\[CITE\]](#) It is many people's belief that languages such as Python & Java are more complex than Visual Basic. Many people find other language's syntax easier to understand. It is a matter of preference to be honest.

So you're saying the syntax is what makes other languages more complex? This stigma against VB that it's good for teaching you the fundamentals of programming and nothing more is ridiculous. It can accomplish the same as Java or Python.

With this logic, you may as well say the same for C#. What point is there in getting a 'feel for the framework' then moving off to another language independent of .NET? It makes 0 sense.

Earn - October 27, 2015, 5:07 am

(Oct 27, 2015 04:55 AM)Odus Wrote: [\[CITE\]](#) So you're saying the syntax is what makes other languages more complex? This stigma against VB that it's good for teaching you the fundamentals of programming and nothing more is ridiculous. It can accomplish the same as Java or Python.

As I said, it isn't everyone's opinion, however it is a lot of people's opinion. You are free to have your belief.

Odus - October 27, 2015, 5:13 am

(Oct 27, 2015 05:07 AM)Earn Wrote: [\[CITE\]](#) As I said, it isn't everyone's opinion, however it is a lot of people's opinion. You are free to have your belief.

The difference is it's fact, not opinion. You can't compare modern VB.NET to old BASIC.

Earn - October 27, 2015, 5:25 am

(Oct 27, 2015 05:13 AM)Odus Wrote: [\[CITE\]](#) The difference is it's fact, not opinion. You can't compare modern VB.NET to old BASIC.

The syntax of VB.Net is a lot simpler than other languages & therefore it is easier to pick up. This isn't the case for all people though, as some people find other languages easy to pick out, however the majority of people find VB.Net easier to learn than other languages. I was not comparing modern VB.Net to old Basic. I do not know where you got that from.

I think you may have misunderstood me. I did not mean that VB.Net is only good for teaching the fundamentals of programming. All I meant was that many people find it easier to pick up than other languages. I find VB.Net very useful & it is the main language I code in.

Sorry for any confusion I have caused. I hope this clears it up a bit for you. If you don't agree with me, that is fine. I am just voicing my opinion.

I agree it's easier to grasp than other languages but you said once you master it (not possible btw), move on to more complex languages. This is why I asked you to explain.

When you said "hence basic in the name", I thought you were making a reference to VB's predecessor. That's why I said they can't be compared.

All good.

Ah, okay. I understand you now. It is good that it is all clear now.

Have a good one. ?

I don't think moving away from a language because "it's too easy" is good advice. If anything, people should be moving towards languages that are easier to write in; that is of course only if they are easy without hindering what you can accomplish in them.

King of Hearts - November 6, 2015, 10:29 am

I have been slacking a little bit but if there's any changes you'd think I should implement, please post them here instead of pming me.

Thanks
