I'm not asking for your methods that make you hundreds, just a simple method that with effort and time put it I can make some back.

I also don't wish to pay, sorry.

I have no recording equipment and such, otherwise I would probably try and set that up.

Build an email list and promote them products from example Clickbank. This has made me the most money.

But you need some investment. A webpage for your opt-in, and a bulk-mailer like Aweber, where you hold your list. And of course some traffic, which you can get from even HF. The traffic must be targeted though, so if you take the niche internet marketing, find traffic for that. On your opt-in page give away a random e-book. Then when they give you your email through the page, start to promote them products. This is a shitty guide, but I'm too tired to write any better. I bet there are guides on

building an email list everywhere.

Good luck!

I used to be able to make 2-5 dollars a day from running a Glype Proxy. Just pay \$20 dollars on proxy.org for advertising and you'll get pretty good traffic and then just monetize the site. You could amplify your profit by creating multiple. You definitely won't make a ton of money but they pay for themselves as you could possibly make up to 3-400 a month. Good luck if you do try this out.
