Thread: [Looking for an asp shell with connection to database and upload and execute function](#)

ASTRAPI - September 7, 2015, 5:52 pm

Hi

I am looking for an asp/aspix shell with connection to database and upload and execute function :)

It is for a windows server that i can't run php and i want to get local admin info and if i am lucky to crack them or maybe use metasploit for privilege escalation :)

Any info?

Thanks

bass booster - September 7, 2015, 6:31 pm

I've been looking for a database viewer all day, got nothing. As for a shell, I got a c99 updated and that worked fine.

Also maybe a wso 2 version might have worked but I don't remember

You can use the shell to look for the php files that connect to the db once u find it click

then enter the info

just look hard and try to find a php that is used to connect to the db (their is always one if the website has a db)

ASTRAPI - September 8, 2015, 6:10 am

I am asking for an asp/aspix shell as php is not running on the server :)

I have login and i know how to connect using a shell but i always used php shell but now i need an asp/aspix shell.....

ASTRAPI - September 8, 2015, 7:43 am

Great thanks i will test it :)

Is the correct syntax to use Connection String like this?

Server=SQLServerName; Database=YouDatabaseName; User Id=userid; password= password

Also i got a user and pass from Web.config.... Where can i use them to login for?

Web.config is config file use the username and pass to connect to the database using the shell i gave you

ASTRAPI - September 8, 2015, 9:53 am

Yes but the shell asks for Connection string and not just user and pass that's why i ask for the syntax of it...

I know the login, but the database isn't mysql it's mssql (Microsoft sql). I tried Wso but it didn't let me connect to the db

I used this shell like 6 months ago xD and I forget the syntax ? . if you can pm me the shell then i can try to connect to the db

ASTRAPI - September 9, 2015, 11:35 am

I will wait first if anyone knows the syntax and post it here :)

nameisno - September 9, 2015, 7:55 pm

it's easy to connect to the the db on win servers just make sure that the db is MSSQL or OLEEDB

ASTRAPI - September 10, 2015, 11:55 am

The shell is asking for syntax string

nameisno - September 10, 2015, 12:14 pm

u don't have to connect from a shell :3 u can connect from many programmes from microsoft or other softwares & if the db is OLEDB u can easily download it a open it from Microsoft Access programme then u'll get all tables ;)

ASTRAPI - September 11, 2015, 5:33 am

I do not have access to db files to download them and there is no any phpmyadmin panel or something related so the only way i think is to use the .asp shell and get a connection to the db or not?

nameisno - September 11, 2015, 4:58 pm

you didn't understand me clearly ... if the db MSSQL you can connect to it without any shells using microsoft softwares

& edit to it also & if the db is OLEDB locate the .mdb file & download it then open it as i told before All of these dbs for (aspx or asp applications) in windows servers ... if the site based on php & the webserver is windows locate any file with the name connection.php or conn.php then u will get the user & pass for MYSQL & u can connect to it using shells :) so u need to know the database kind first to connect to it :)

OLEDB IS MICROSOFT ACCESS DATABASE usually used in windows 2003 servers

ASTRAPI - September 12, 2015, 1:13 pm

you didn't understand me clearly :)

Connection to the database using Microsoft software is not possible as the database must allow remote connections and the current server does not.

So the only way is to connect using an asp/aspx shell.

The shell that i got support sql connection but it asks for syntax string to connect to it.....

The database server is mysql or mssql ... not sure.....

Also about the connection info to the db i got already username and password from web.config file :)

nameisno - September 13, 2015, 6:52 am

ok u missed something ;) the db for the server is MSSQL as u got the user and pass from web.config & the syntax error because the conn strings are not correct sucj as u forget to delet " after the conn & Most of the MSSQL I have seen allow remote connection if u are sure try to use a different conn string from the web.config... so i will ask u a question way u want to connect to the db !! just to edit or to know the user & pass

ASTRAPI - September 13, 2015, 11:55 am

this is what i got from web config:

```
C:\inetpub\wwwroot\sites\www.domain.com\Web.config --- Data
Source=123.456.789.000,1433;Initial Catalog=www.domain.com;User
ID=userx;Password=randompass
```

port 1443 so it is Microsoft SQL Server

And the asp shell is asking for connection string and i don't know the syntax of it so i can connect to it...

The target is to dump the database or just view/edit the db :)

nameisno - September 13, 2015, 1:16 pm

use this script .. upload it then put all information(server ip with prot if nothing happend try to remove the port & user & pass & database=Initial Catalog)

I uploaded it to u -->

mail.ixoyehelps.com/public/downloadfile.aspx?f=ys%2f1RQZFJO0qU5DH0ZLIOJW5WcBFtWz%2fCgBx0yH9B6MV1S31eBV5yPW9n75%2bSMwXpCO5Za%2b7%2beM%3d
pass : 1337

note that the script based on aspx not asp :)

ASTRAPI - September 15, 2015, 10:46 am

404 - The resource you are looking for has been removed, had its name changed, or is temporarily unavailable.

Can you please reupload it to another host?

Thanks !

nameisno - September 15, 2015, 4:11 pm

seems hack forums doesnt allow smart mail download links :\\ i will upload it to u some where else

this is the link i don't know why this forum delet some parts from my link :3 it's smart mail download link :3 100% safe :3

this alt link

bit .ly/1F1owlR

delet space

ASTRAPI - September 17, 2015, 3:11 pm

It is asking for a password

nameisno - September 17, 2015, 4:27 pm

(Sep 17, 2015 03:11 PM)ASTRAPI Wrote: [\[CITE\]](#) It is asking for a password

I wrote it to you before in a message & comment that the pass is : 1337
