Thread: [dotnetbar strange issue vs 2013](#)

elfenliedtopfan - September 8, 2015, 10:00 am

ok when i was on windows 10 it worked perfectly i now have a issue witch i cant fix i have installed this multiple times and uninsulated multiple times

thinks i have tried

uninstall and re install

on install i get a error code
error 2869

done some research on that error and people say its uac so disabled that and run cmd as admin and tried the following

msiexec /i c:\DotNetBarSetupTrial.msi in cmd but still the same error on install

issue i have in vs

i.imgur.com/WJ9JHqd.png

add http :// to the start of the code

as you can see i have all the stuff on the form it worked once then now when i add buttons and stuff it goes to the bottom and it wont let me place buttons select them or copy them and i dont know why this is happing

as you can see the long list of items at the bottom of the gui

when i drag and drop that trying to get it to show on form i just get a black cross.

any help would be apricated thanks in advance

Did you purchase a real DotNetBar license? Or is this cracked?

Well, if it's an out dated version of dotnetbar, it wont work with 2013, but I'm glad you got it working.
?
