Thread: [Best RAT + VPN + Crypter combination?](#)

TheTurboEngineers - September 9, 2015, 4:25 am

Hey everyone,

Im going to start to RAT again.

Im looking for the best combination regarding the RAT itself and a VPN & Crypter.

I got cash to spend so that ain't a problem.

Regards.

Forc?d - September 9, 2015, 4:30 am

NVPN.net, NanoRat and deluxcrypter

TheTurboEngineers - September 9, 2015, 4:41 am

Thanks for your suggestion mate.

Anyone else?

CODEINE - September 9, 2015, 4:52 am

143vpn , Luminosity Link , Crypter - Private crypts

cucuxas995 - September 9, 2015, 6:21 am

nvpn , Luminosity Link , topher crypter

Pharmacist - September 9, 2015, 6:25 am

VPN - 143VPN or nVpn

RAT - You'll need to figure that one out yourself.

Crypter - Code your own, there's no HQ crypters on HF. ESET owns licenses for all of them.

Nomad.Null - September 9, 2015, 6:36 am

You mean 'signatures?'

True, signatures work well, but all you need to do is learn how to develop your own stubs and you can realistically use any crypter. The only pain in the ass part is that most are written in compiled languages, so just find one written in Python or another interpreted language that you can run on the fly and edit the stubs yourself.

I found it a few days ago, and also, if you search "ESET" on HF you'll see a lot of (what looks to be) evidence of what the guy is saying.

Nomad.Null - September 9, 2015, 6:46 am

Lol, oh really? That IS interesting. I knew there was a reason I liked ESET. I'm glad I've always trusted them. This is highly amusing. Thank you for sharing.

ESET...fucking geniuses. I love 'em. This is either going to ruin Crypters' business or make them filthy rich. ?

I thought it was very interesting also, I've used ESET on my main system and It was extremely interesting to read about how they detect malware from Hacking websites, I've caught myself looking it up on Google, also. Lol.

Lettados - September 9, 2015, 7:27 am

This ESET thing is very interesting. ESET seems the best anti-virus system then. Can you guys help me code my own Crypter? (Tutorials and source code so i can analyse and learn) Thanks.

Edit = Found what i need thanks.

acorsi85 - September 9, 2015, 8:11 am

I use: 143vpn , Luminosity Link , Abyss Protect Crypter...

ahemokay - September 9, 2015, 8:14 am

VPN - RA4WVPN.

RAT - LuminosityLink.

Crypter - AbyssProtect.
