Thread: [\[TUT\]Crypto Mining on LuminosityLink \[Litecoins\]](#)

Incendiary. - September 11, 2015, 11:17 pm

Hello people. This is a small part of my LuminosityLink megathread. I have decided to include this tutorial in a seprate thread due to its size. If you find any errors please PM me about them, do not post them on the thread. I was only using myself in this tutorial, not bots. If you have any issues with the cryptominer please feel free to contact the Luminosity support team, or ask your question on the Cryptominer support thread.

Support Thread: <https://hackforums.net/showthread.php?tid=4954448>

Sales Thread: <https://hackforums.net/showthread.php?tid=4778957>

Cryptominer Support Thread: <https://hackforums.net/showthread.php?tid=4902803>

LuminosityLink has a HUGE dedicated support team. The best way to get in contact with us is to join the 'LuminosityLink Customer Support' Skype group. You can do so by pasting the following text into a Skype chat and clicking on it. Please note this has to be clicked on from within Skype! If the code isn't working please contact me ASAP and I will update it. We have to constantly change it due to immature 11yr olds who think they know my IP. Please excuse them if you encounter one in the group, they mostly have family issues.

Code

skype:?chat&blob=1p-MbDMWQOFgA7uNL8kN0gUIFsvjaZEchTPtiYX_SlyzmNM7tFISiT_M-KfuaiZiiMvwXJSt00fniEQEgThis Skype group aims to provide an active and friendly approach to support. There are members of the support team online 24/7 in the group, as well as other customers willing to help others. If you need quick help this is the way to get it!

Setting Up Your Litecoin Wallet

First you will need to get your wallet set up. Allot of people I know do not recommend using online wallets, so I have not even looked into them. For our wallet we will be using the Litecoin Core. This can be downloaded from <https://litecoin.org/> Choose your download and launch it. Install it to a desired location and open Litecoin Core after its finished installing.

You will be greeted with the following screen. The wallet needs a large directory. So i recommend installing it on a large external/internal drive.

Spoiler [\(Click to View\)](#)

Now your wallet will have to get up to date. This will take several hours. So i recommend doing something else in the time.

Spoiler [\(Click to View\)](#)

Once it is finished go to File>Receiving Addresses. You will see a window open with your receiving addresses. Right click on the first data set and click 'Copy Address'. This is your LTC address that people can use to send you money. I recommend writing it down somewhere.

Spoiler [\(Click to View\)](#)

Setting Up Your Mining Pool Account

For this guide I will be using <https://www.litecoinpool.org> as my mining pool. Another good pool to use is <https://ghash.io/>. We will be using them to mine DOGE later.

Go to their [Signup](#) page and create an account. Once you have created an account login. Go to [My Account](#). Here you can see all the information and stats about your account.

Setting Up Your Miner In Luminosity

Now that you have your wallet and pool set up, its time to get the miner done! This is what will use your clients to 'mine' for Litecoins. Go to the 'Crypto Miner' tab under 'Command And Control'.

Spoiler ([Click to View](#))

Click on 'Setup Miner Config'. This is the important part. If you get something wrong here your miner will not work. Below are the settings you will need to set:

Miner Type: Make sure this is set to Script (LTC, OMC, DOGE, etc). If it is set to SHA-256 it will not work.

Mining Style: I recommend keeping this to CPU mining unless you have a large amount of powerful, most likely gaming, machines infected. If you choose GPU mining with less powerful machines you will get little results.

Authentication: This is the login for you worker. On litecoinpool, your username is your user on the site with a .1 at the end, for example mine is 'incendiary.1'. Your password is by default '1'.

You can change you worker user/password on your [My Account](#) page on litecoinpool. You can also add more workers.

Spoiler ([Click to View](#))

Mining Pool: This is important. Depending on your poll this will vary greatly. For litecoinpool you can find the servers on the [FAQ page](#). At the time of writing this these where the servers (if they change tell me in the comments). Chose the server closest to your main client base.

===== stratum+tcp://litecoinpool.org:3333 (London, UK)

===== stratum+tcp://us.litecoinpool.org:3333 (New York, USA)

===== stratum+tcp://us2.litecoinpool.org:3333 (San Francisco, USA)

===== stratum+tcp://ltcpool5brio2gaj.onion:3333 (Tor hidden service)

Proxy: I personally have had issues setting this up. If someone wants to PM me a tutorial on this I will be happy to include it.

Once you have filled in all the settings you should have something that looks like the image below. Click in 'Save Miner Config' to save your settings.

Spoiler ([Click to View](#))

Once you save your settings you will a dialog box asking you if you want to test your miner config on your pc. Click on yes and open task manager to see if your CPU usage goes up. If it doesn't then check the Command Prompt that opened with the miner and check the errors. To stop testing on yourself just close the Command Prompt.

Spoiler ([Click to View](#))

Spoiler ([Click to View](#))

Spoiler ([Click to View](#))

That's it! Your miner is now set up and ready to go! Click on the 'Start/Update Miner' button and your slaves will start mining! I recommend using "Half of CPU Threads" to avoid suspicion. Check your [My Account](#) page to see if your speed is above 0.00. If your not getting any progress redo the above steps and try again. At the bottom of your My Account page you can change the payout threshold. I personally have this set to the lowest amount (0.01 LTC) so i can get my profits in my wallet ASAP.

Spoiler ([Click to View](#))

NOTE: I am only using ONE client (my secondary computer) to mine in this guide. You should expect speeds a lot faster than mine if you are using more clients. I recommend mining with 50+ online clients.

KFC Watermelon - September 11, 2015, 11:24 pm

Great tutorial. I added a link to this thread at the top of my official crypto miner guide -

<https://hackforums.net/showthread.php?tid=4902803>

Thanks KFC <3

I am halfway through the main thread. It should be finished and posted by this time tomorrow. ?

Esme - September 12, 2015, 2:53 am

Nice write-up, though mining LTC is pretty much useless unless you have a large number of bots with good hardware.

Incendiary. - September 12, 2015, 3:08 am

Mining off 2 bots (dont ask). Ive managed to get 0.001LTC in the last 3 days. That's with 'All But 1' CPU thread' selected.

Imagine doing that with 100 bots. Sure 1 LTC is only worth ~3\$ but its still \$\$\$:P

I will be making one for DOGE (pretty useless) and OMC. If anyone knows a good OMC pool please let me know.

SIM-2564555 - September 12, 2015, 3:23 am

Can you tell me the expected profits from mining with +300 clients .. because i tried that before and get only fails

Incendiary. - September 12, 2015, 3:28 am

I would expect you to make at least a few dollars a day. Ive never tried with that many so i couldnt tell you.

SIM-2564555 - September 12, 2015, 5:28 am

sorry man but i tried that before few days , truly u can make few cents in a week

Atharva - September 12, 2015, 5:32 am

Quote:This will take server hours. A typo there.

Otherwise, nice tutorial.

Incendiary. - September 12, 2015, 5:32 am

Im not going to comment on effectiveness on numbers on clients that i do not have.

Maddles_temp - September 19, 2015, 8:33 pm

Wow man there are like 30 LL cryptomining tutorials on here. You stole the works cryptomining and luminisoty link. Did you give credit? Did you???? HUH??? Wow Grow up!

Incendiary. - September 19, 2015, 8:36 pm

Someone is rather salty.

At least i made a tutorial thats mildly original, and written from scratch.

Grow up and fuck off.

You stole content and the words. You just rearranged someone else's words. Give cRedit where it is do!!!!!!

Incendiary. - November 16, 2015, 5:37 pm

Would you guys like me to remake this tutorial? As well as make a OMC/DOGE/Other Altcoins tutorial?

Tried mining with 200+ online clients, its pretry useless, inly getting few cents, not even \$1 a day

Incendiary. - November 16, 2015, 6:40 pm

LTC are becoming more and more like BTC when it comes to mining.

OMC/DOGE/DASH etc are still semi profitable.

Xen010 - April 25, 2016, 10:01 am

maybe a stupid question, but what if i started the mining, and after an hour i have 20 bots more. Does the clients automatically start mining, or do i have to hit "start/update miner"?

KFC Watermelon - April 25, 2016, 10:22 am

It automatically starts mining.

RIP Incendiary

You would need to enable mining on new clients.

Xen010 - April 25, 2016, 10:25 am

thank's for the fast reply guys!

so just to avoid missunderstandings, if some new clients connect, i have to hit "start mining"?

KFC Watermelon - April 25, 2016, 10:27 am

No, as long as the crypto miner is running, it is sent to clients when they connect.

It's part of the client configuration system.

Xen010 - April 25, 2016, 10:28 am

ah, this is a nice feature.

btw, i presses "stop mining", but the bots are still mining. is this a bug or a misconfiguration form my side?

They will stop mining, but your pool may take time to update.

Xen010 - April 25, 2016, 10:32 am

kk, thanks for the support!

xscatta - September 8, 2016, 3:24 am

thanks for the tut, got everything working. now to spread :)

Couldnt get GPU mining to work tho
