What hypervisor are you using, Vmware or Virtualbox?

?Syria - September 12, 2015, 7:32 pm

(Sep 12, 2015 07:31 PM)ITEngineer Wrote: [\[CITE\]](#) What hypervisor are you using, Vmware or Virtualbox?

i am using virtualbox??

LSDoom - September 12, 2015, 7:36 pm

Might have found a solution for you.

This was found on a virtualbox forum.

Spoiler [\(Click to View\)](#)

My Solution:

I went into the folder "C:\Users\COMPUTER_NAME\.VirtualBox\Machines\VM_NAME\" and saw two xml files but for some reason they both had suffixes.

1. VM_NAME.xml-prev
2. VM_NAME.xml-tmp

So it simply just couldn't find "VM_NAME.xml" because it technically didn't exist.

I made a copy of the "VM_NAME.xml-prev" file and renamed the copy to "VM_NAME.xml"

Restarted VirtualBox and it worked just fine.

Have you tried reinstalling your hypervisor, as well as re-creating your virtual machine?

gtaibo - September 13, 2015, 3:54 pm

You might going to have to start from scratch...

?Syria - September 17, 2015, 5:29 pm

I suggest going to vmware. Far less issues than with vb.

If you need help setting it up, just pm me. Make sure you get workstation, you can find a key laying around, if not pm me I have extras

I had my share of frustration with Virtualbox. That's why I switched over to Vmware Workstation. I know its not free, but your experience with it, will be a lot different.

- 1) It performs much better than VB.
- 2) It almost doesn't crash.
- 3) It has a lot less issues and bugs than VB.

?Syria - September 18, 2015, 6:37 pm

Just got VMWare as you guys liked but

ITEngineer - September 18, 2015, 10:38 pm

- 1) Do you have Virtualization enabled in the BIOS?
- 2) What is your Windows version x64 or x86bit?
- 3) Could you provide a copy of that Vmware.log file?

- 1) I dont under stand?
- 2) 64, yes i have 64x vmware

Lol I just thought of this. What Kali do you have? Post the file name that you made kali with please.
Example of mine:kali-linux-2.0-amd64.iso (Although I HATE 2.0 I use 1.1.0 so that name is "Kali Linux 1.1.0c AMD64".

Download a premade VM of kali from
<https://www.offensive-security.com/kali-linux-vmware-arm-image-download/> I don't like 2.0 so I suggest grabbing 1.1.0c and then just update the pkgs from their
