Thread: [Encode this to work on google chrome.](#)

Skidy - September 13, 2015, 7:41 am

This works on a website, on internet explorer though not google chrome. Can anyone encode this so that it bypasses the chrome XSS filter and works on Chrome?

I am willing to give a small reward if you can get it to work. (If this is in the wrong section please move it).

Bypasses pop up now and again on blogs but the shelf-life will be short as either the blog poster or audience will report it. I even posted one I found back in late 2013 and got response: "we do not generally reward XSSauditor bugs, because XSSAuditor is a best-effort line of defense when the flaw is in the website." The auditor code is open-source, so go inspect it and find your own! (then keep it to yourself ! ?)
