Thread: [How to Read a config.ini](#)

Jesse Pinkman. - September 14, 2015, 3:49 am

hey guys, i want my program to read a config file. i have gotten it to make a config.ini and put code inside of it

Code:

```
Code #include <iostream>
#include <fstream>
#include <string>
using namespace std;
int main()
{
    int Delay = 0;
    int Overshoot = 0;
    int Cooldown = 0;
    ofstream file_;
    file_.open("Config.ini");
    if(file_.is_open()){
        file_ << "Delay = \n";
        file_ << "Overshoot = \n";
        file_ << "Cooldown = \n";
    }
    file_.close();
```

So in the config to ini you type

Delay = 22

How do i make that change int Delay to 22?

Thanks for your time :)

The triple post though..

I suggest you try to write your own simple parser if you are new though.
