I've tried for so long to memorize the spray pattern of the AK-47. Every person I've asked told me that I should practice in a private match. I was wondering if there is a easier/better way to learn. ?

Search up recoil master on steam workshop. Improved my spray a lot in about 2h of practice.

You can use rcs on a cheat and watch the guns placement in regards to the enemies head and what bullet you are on.

Basically what sleepy suggested, probably the best way to learn it. I used it to learn how to control my recoil during the period of time I wasn't cheating :^)

Just pull down, screw the pattern lol

AK is pretty easy imo

Step 1) Aim at head/neck area

Step 2) Go for 1 taps or do 3 round bursts

Step 3) After 3rd round stop spraying and go for 3 more burst fires

Step 4) If you really want to spray, just pull the damn gun down, they should be dead by then

Yep.

He's also released some other very helpful maps if you or anyone else in the thread stumbles across this post.
