Thread: [Is there a way to bypass the authentication firewall message?](#)

nameisno - September 15, 2015, 8:57 am

Hellow everyone, Just want to know is there a way to bypass the authentication like the firewall that on the admin panel ,, I know already the post method but is there a way to bypass it when the htaccess limit the access to get + post only :(

Artisanal - September 15, 2015, 8:59 am

Are you talking about bypassing .htaccess ?

I mean how to bypass the authentication that the owner of the website made using htaccess + htpasswd

htaccess file:
AuthType Basic
AuthName "Password Protected Area"
AuthUserFile /home/aamalyqa/public_html/admin/SystemImages/aaa/.htpasswd
Require valid-user

<limit GET POST>
require valid-user
</limit>
as an example :)
if the htaccess file is :

AuthType Basic
AuthName "Password Protected Area"
AuthUserFile /home/aamalyqa/public_html/admin/SystemImages/aaa/.htpasswd
Require valid-user

I can bypass it easily using post or brup suite to edit the header :)
but when the htaccess is
AuthType Basic
AuthName "Password Protected Area"
AuthUserFile /home/aamalyqa/public_html/admin/SystemImages/aaa/.htpasswd
Require valid-user

<limit GET POST>
require valid-user
</limit>
I can't bypass it as it limit only get + post :(so is there a way !!

Make a request that isn't GET or POST using LiveHTTPHeader, since those are the methods that htaccess is currently blocking.
