Thread: [\[C++\] Volkoff Http Botnet - Development thread - Looking for testers](#)

VolkoffHttp - September 15, 2015, 5:52 pm

Volkoff is an HTTP bot written in C/C++. With an easy to use panel and simple control, Volkoff is a great HTTP bot for all general uses. It has all the features of a stable, reliable, and properly made bot. Almost all HTTP bots are quickly thrown together with simple features as drop to %appdata%, set Run registry key, and send plaintext communication with C&C. Time has been taken to put Volkoff above these run-of-the-mill malware seen so often. Volkoff features a startup method other than registry key, heavily encrypts its communication, and is able to keep persistence of its own process. In this way, Volkoff aims to provide a dependable HTTP bot to the community. Specific features are as follows:

We will be giving access for people to test out our product. If you would like to beta test it please let me know and I will review and if I accept you. Make sure to have jabber so we can discuss. Beta testers would be given access tomorrow.

Features:

(These are features we currently have completed for our bot)

- ? Coded in C/C++
- ? Binary size 70kb uncompressed
- ? UAC Social Engineer
- ? Non registry key startup method
- ? Startup as admin every logon
- ? Process persistence via dummy process watching bot's process, bot also watches dummy process for more stability
- ? Bot is stable. Watches its threads and will relaunch thread if it fails
- ? Encrypted communication (via RC4 protocol, each bot install has different RC4 key)
- ? Supports commands: download and execute, update bot from URL

Tested on Windows XP-8.1 (x86 and x64)

Plugins in testing:

These are things we are currently working on to adding to our bot.

- Hidden URL visitor (page muted) - Basically done but needs more testing
- x86 rootkit (hide process and bot file) - rootkit just needs to be adapted to couple other OS's, has been tested on win7 and 8
- Others to come, and possibly from requests of customers

Beta Test Application:

To beta test our botnet we need people who can actually provide some useful information for us so please be able to know how to use a botnet and bring in infections etc.

To clarify we are looking for people who are able to test it on multiple platforms from high to low amounts of victims and you will be running commands to check if they are working. The panel will be hosted on our end on our server. We just need someone to run some test with about 10-20 victims

per OS. Also to see how much we can load without any issues which is why someone with a EK would benefit our testings.

Code Name:

[b]Do you have access to a EK:[/b]

[b]Do you have your own traffic:[/b]

[b]How many victims do you have right now to test:[/b]

[b]Experience with Botnets:[/b]

[b]Jabber Info:[/b]

What do you mean by this?

Lawsuit - September 15, 2015, 7:34 pm

Seems like a the rise of a very HQ product. Best of luck.

Paul Wilson - September 15, 2015, 7:48 pm

Is this the right place to apply lol

Anyway I'm applying

VolkoffHttp - September 15, 2015, 7:49 pm

You need to apply properly as listed on thread.

Uiqueblhats - September 16, 2015, 2:48 am

Name:Uiqueblhats

Do you have access to a EK:Yes, But not for the testing purposes of your bot

Do you have your own traffic:Yes

How many victims do you have right now to test:Max i will test with 200

Experience with Botnets:Yes

Jabber Info:uiqueblhats@xmpp.jp

VolkoffHttp - September 16, 2015, 4:39 am

Thanks for the offer but no need for help making the botnet. Its basically done already.

DevNet - September 16, 2015, 8:34 am

Will there be other plugins sold outside of HF? (I'm sure you know what I mean)

If so, I might apply.

VolkoffHttp - September 16, 2015, 8:38 am

(Sep 16, 2015 08:34 AM)DevNet Wrote: [\[CITE\]](#) Will there be other plugins sold outside of HF? (I'm sure you know what I mean)

yes =D there are other plugins but you would have to talk to use to get those list.

Affluent - September 16, 2015, 8:40 am

Do you have access to a EK: Yes

Do you have your own traffic: Yes 50k/day

How many victims do you have right now to test: None

Experience with Botnets: Heavy. PM me.

Jabber Info: PM me.

VolkoffHttp - September 16, 2015, 8:42 am

Jabber Info: PM me.

I have sent you a private message. Please read.

That Guy You Know - September 16, 2015, 12:22 pm

Name:That Guy You Know

Do you have access to a EK: No (hmu if you have one available though been looking)

Do you have your own traffic: No

How many victims do you have right now to test: ~150

Experience with Botnets: Decent amount

Jabber Info: PM me

MicroCoil - September 16, 2015, 12:51 pm

Plugins sound interesting. Please tell me you will release a SDK with he bot so people can make their own plugins.

I'm fed up of devs selling modular bots and dont give the customer a SDK to make their own plugins.

XeAstro_ - September 16, 2015, 2:01 pm

ill test ur thing for mw please pick me lol

exploit.in would be the place to look for EK's

Wish I could apply but to be honest I have no real experience in it.

Although I do have a contact that could get tons of traffic (100K+)

VolkoffHttp - September 16, 2015, 2:27 pm

We already have someone who has a large traffic for us. Thanks for the offer tho. We probally wont end up needing a Ek anymore as we will have other ways to get more methods to test etc.

Lenchmob - September 17, 2015, 6:16 pm

How much would it cost for this also.. What program is hidden viewer using possibly IE?

VolkoffHttp - September 17, 2015, 6:29 pm

(Sep 17, 2015 06:16 PM)Lenchmob Wrote: [\[CITE\]](#) How much would it cost for this also.. What program is hidden viewer using possibly IE?

Thinking around \$100-200 or flat \$400.

Right now it currently works with IE. Default Browser will be worked on later.

BTW just a update for people. You will not need to crypt your bins. We have made a few updates but cant edit op thread due to time expire. All new features and updates will just be listed on sales thread.

Lenchmob - September 17, 2015, 8:34 pm

IE will be better because it doesn't have adblock.

House M.D™ - September 17, 2015, 10:43 pm

moosa666 - September 18, 2015, 1:01 am

i can help u test i can put it in a vm

draganmikhailovic - September 18, 2015, 2:31 am

Great seeing active developers here.

Imho, someone should make a non resident loader similar to h1n1 to load your files with admin privileges(high>low integrity) to make sure what ever monetizing exe youre running gets executed properly.

Some search+click with IAB standards in a full featured botnet would be neat.

SIM-297877 - September 18, 2015, 8:03 am

How do you handle the issue of fake bots? How does the controller know if the connection is real or not?

VolkoffHttp - September 18, 2015, 8:54 am

(Sep 18, 2015 08:03 AM)SaturnsVoid Wrote: [\[CITE\]](#) How do you handle the issue of fake bots? How does the controller know if the connection is real or not?

Well during first ping the bot sends whole encrypted blob to server, and on subsequent pings only sends the bot ID. it will not accept a bot onto the server without first successfully getting the encrypted blob and verifying it is all legit info. so to fake bot would have to put together the encryption scheme and build proper string for panel to accept

Im pretty sure he means running the bot.exe in a vm. ?

bluntly - September 19, 2015, 3:13 am

I like the functions, they are freaking awesome!

But is it really that clever to use .NET? Especially if you're dealing with things such as police n sh*t!

And also you don't want your stub to be decrypted by researchers, do you ?

Lucifer Morningstar - September 19, 2015, 4:12 am

It says it's C++ in the title and the thread.

It says it's C++ in the title and the thread.
Well i think i misunderstood something. I just looked up the difference. Nevermind xD
The thing i was talking about was C++/CLI.
And as far as i know C++ is turning into IL Code when you code in VB.NET, isn't it?

Parnassius - September 19, 2015, 4:46 am

Rise of a HQ product? Stop making these development threads you kids they never get completed/finished....
