Thread: [Found admin page \[Help\]](#)

Project Fallout - September 16, 2015, 6:56 pm

I found the admin page for the website I wish to attack...

Its Cpanel. How would I go about finding the username and password for the Cpanel

Vibe - September 16, 2015, 6:58 pm

The owner of the site/ hosting package would be the one with that, target him.

bass booster - September 17, 2015, 7:22 am

Send him an email saying you found a login and you want the user:pass for the cpanel ?

JK, use SE or rat the owner or do anything to try to get it.

If he's like me, he'll have it saved somewhere outside of the email.

Like I have it written down on a notepad that sits on my desk so RATting me wouldn't help for getting my site info

Is there no way of doing it without SE or Ratting. Because yes its a possibility but is there no way of doing it using say Kali Linux or.. something. I want to be able to upload a shell but there is no where to upload files

Passwords.txt by any chance :D

Spoiler [\(Click to View\)](#)

im kidding, chill

Other than trying to Bruteforce the login or SE/RAT The owner to get the login, there aren't many other ways to get the access you want (Unless you find a vuln on the website that lets you upload a file (Or make the server download one)

Kali is just a collection of tools, you could try and brute force like others have suggested but your best bet would be to try and find vulnerabilities

Awdr - September 18, 2015, 6:36 pm

Bruteforcing in my opinion is a stupid unless you have a massive amount of accounts to crack, I would advice scanning the website for vulnerabilities/scanning his /server (the one that is hosting the website) and if you get lucky exploit into website/server --> steal files. Or you could SE/Phish him.
