Thread: [FileSystemWatcher](#)

FluffyMcFluff - September 17, 2015, 6:11 am

[Solved]

Had to put IncludeSub Directory's to True

I have a FileSystemWatcher (fsw1)
AndListbox 1

Listbox 2

Listbox 3

Listbox 4

Textbox1 (Enter Path of location)

FolderBrowserDialog1 (fbd1)

Button1 (Browse for path)

My Full Code :

PHP Code

<?php

Public Class Form1

```
Private Sub fsw1_Renamed(ByVal sender As Object, ByVal e As System.IO.  
FileSystemEventArgs) Handles Fsw1.Renamed
```

```
    ListBox1.Items.Add("File- " & e.FullPath.ToString & " renamed at: " & System.DateTime.Now)
```

```
End Sub
```

```
Private Sub fsw1_Created(ByVal sender As Object, ByVal e As System.IO.FileSystemEventArgs  
) Handles Fsw1.Created
```

```
    ListBox2.Items.Add("File- " & e.FullPath.ToString & " created at: " & System.DateTime.Now)
```

```
End Sub
```

```
Private Sub fsw1_Deleted(ByVal sender As Object, ByVal e As System.IO.FileSystemEventArgs)  
Handles Fsw1.Deleted
```

```
    ListBox3.Items.Add("File- " & e.FullPath.ToString & " deleted at: " & System.DateTime.Now)
```

```
End Sub
```

```
Private Sub fsw1_Changed(ByVal sender As Object, ByVal e As System.IO.FileSystemEventArgs
```

```

) Handles Fsw1.Changed
    ListBox4.Items.Add("File- " & e.FullPath.ToString & " modified at: " & System.DateTime.Now)
End Sub

Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles Button1.Click

    fbd1.ShowDialog()

    TextBox1.Text = fbd1.SelectedPath

    Fsw1.Path = TextBox1.Text

    MsgBox("Path to monitor is now set to: " & TextBox1.Text)

End Sub

End Class

```

The problem i have is with Changed events whenever I edit a text file it doesnt show "test.txt" has been edited just shows file "Test" has been modified is their anyway to do this ?

What is E, it's a tree view? Fullpath obviously doesn't return the file extension.

I don't have Visual Studio on me at the moment but try looking through the suggested codes, there is probably one that makes sense to give you your File Extension.
