Thread: [WiFi Venom - 2015 | Reupload](#)

FrostByte - September 17, 2015, 10:32 am

Hello, i'm sharing my lil tool I designed. It keeps devices connected to the WiFi on your Home Network! And log your victims to see when they were Offline/Online!

Virus Total Scan Report! 0/55

>> [Click Me For Scan Results!](#) <<

Private Message for download link, once I get positive feed back and more reply's I will post link!

Temporary Download Link! ->> [Direct Download](#) << - Download will be removed soon, until product is fully reviewed and rated!

This is just simple tool I know, but their is so much potential things I could add. Please give feed back and what tools you would like to be added to a different project. or added to this one.

Forgot to mention that this program can also offer, Log support, say if you are hosting a VPS and want to know if you server ever goes offline and find the exact date and time it goes offline/online for trouble shooting. This tool has more features than you think it dose at a first glimpse. Keeping WiFi Device is alil bugy atm its not keeping device online for some reason will haft to trouble shoot my code sometime. Please give support so I can begin constant updates and add more features to a stable build. Thanks!

Thanks for your hard work :)

riachusmoot - September 19, 2015, 11:28 pm

I would happily give feedback because it looks good, I can't PM tho :(
