Thread: [Monitor lines and low FPS](#)

DexaPoli - September 17, 2015, 12:33 pm

Hello guys, just bought new PC few days ago. But didnt had money for new GPU so i put my old GeForce 9500 GT.

Other specs of PC are:

AMD FX 8350 4.GHz
HyperX 2x8 GB 1866 MHz
MSI 970 Gaming

So the problems is that i have strange lines on my monitors and low even lower FPS in CS:GO (tested it just here) than on my old PC and brothers. With his GPU i had 100 FPS apporx, and on his PC he has about 150 FPS. His PC has 4 cores mine 8. he has 4 GB RAM and GT 630 GPU. I also updated drivers for everything possible.

This is photo i have on desktop: Spoiler ([Click to View](#))

I don't see any lines, Maybe it's just you're pc screen needs to be replaced

DexaPoli - September 17, 2015, 2:23 pm

they are hard to see for me also sometimes. Depends of color in back. They are like pulsing up and down a bit.

What GPU are you using when it happens?

It might be a sign of a dying GPU.

Yeah, so it's probably a dying GPU.

You could try something like the free version 3DMark Firestrike (It's on Steam as well as their website)

3DMark Website: <http://www.futuremark.com/benchmarks/3dmark#windows>
Steam Store: <http://store.steampowered.com/app/223850/>
