Thread: [Adblock, blocks Facebook's chat and some other features](#)

Mr. WAVES - September 17, 2015, 6:34 pm

Hi guys,

Can someone tell me if Facebook's chat is bugged on PC (not mac, not phones, only pc).

I think Facebook are adding the "dislike" button and that's why it doesn't work. All I see is almost a blank page.

After 2 hours I still having the same problem.

Edit:

SOLUTION !!!!!

I use Firefox on Ubuntu with Adblock.

Adblock does this !!!

Disable your adblock for Facebook for the moment and do a cache refresh (CTRL+F5).

For chatting I normally just login to <https://www.messenger.com>

The problem with using different chatting solutions like this one is getting enough people to use it so that it becomes practical.

That chatting IS facebook. All your facebook contacts is in it.

Its like the android/iphone version but for PC.

Never have had this happen to me before, I use adblock on Google Chrome & Firefox and Facebook chat is always fine.

Seems fixed.

I'll close the thread for the moment.
