Thread: [HTML Viewer \[Source\]](#)

Uploader.sx - September 19, 2015, 1:56 pm

Simple Tutorial Today.

I am going to show you how you make a HTML viewer application with save button to save what you typed.

Add a rich textbox

Add a Webviewer

add 2 buttons

Step 1:

Click on your textbox then double click on TextChanged

Spoiler ([Click to View](#))

and add this code

Code WebBrowser1.DocumentText = RichTextBox1.Text

Step 2:

Double click on your save button and add this code

Code Dim Save As New SaveFileDialog()

Dim myStreamWriter As System.IO.StreamWriter

Save.Filter = "Text [*.txt]*.txt|All Files [*.]*.*"

Save.CheckPathExists = True

Save.Title = "Save File"

Save.ShowDialog(Me)

Try

myStreamWriter = System.IO.File.AppendText(Save.FileName)

myStreamWriter.Write(RichTextBox1.Text)

myStreamWriter.Flush()

Catch ex As Exception

End Try

MsgBox("File Saved!")

Step 3:

Double click on your exit button and add this code

Code End

Enjoy !

Nice tutorial! But the source download doesn't work here? It gives me a HTML parse error.

A nearly identical thread was posted last month. Your version has just added a SaveFileDialog.
