Thread: [Omnicoon wallet for Linux ?](#)

Mr. WAVES - September 20, 2015, 5:59 pm

Hi guys,

I would like to know if there's a wallet for Linux (Ubuntu).

Edit: Can someone tell me if this is working or if it outdated: [Omnicoon Launch downloads/info & support.](#) by [Crypto Miner](#)

There aren't any precompiled wallets for Linux, but you can compile either the qt or daemon yourself.

And that link looks correct.

Is there a compiled one for mac?

I don't think the QT client works on Mac but OmniLite has a Mac version which may work.

<https://github.com/MeshCollider/OmniLite/releases>

The guide is correct but I'm convinced that the download link may be outdated.

You can find the latest downloads on the releases page on github:

<https://github.com/Omnicoon-Project/Omnicoon/releases/tag/v0.9.0.0>

Use the instructions found on github, I compiled my Ubuntu wallet like that.
