Ok title says it all. I tried resizing it countless times. If someone could direct me to the code that needs to be changed I would really appreciate it.

by the way my site is <http://vapebums.com>

UPDATE: I found out that it is only showing the way I don't want it to in safari on my macbook. I tried chrome on my macbook and it worked. I tried internet explorer, chrome, and firefox on my PC and it worked fine there. Any reason why safari is being a lil bitch? I know some of you probably don't like safari but I use it for most of my basic browsing and I would like for my site to look the right way on every browser. If you know how I can fix this that would be great. Ill put screen shots below to show you what I mean.

Safari:
