Thread: [Need Bandwidth chart to measure how hard my botnet is hitting](#)

liltaw10 - September 24, 2015, 9:04 pm

I currently have a botnet. I want to measure the power of it. Message me if you have a bandwidth chart I can put on a dedi/vps to see how hard it hits. Thanks

You need a dstat, you'll need buy a sever with high port speed for be able to handle your attack and show the amount of Gbps while you attack.

Lets say you think your botnet will hit less than 1000M that it is about less than 9 Gbps, you must pick a server with 10 Gbps then you'll be able to handle it.

Knowledgeable - September 25, 2015, 1:20 pm

Hispano is right

And if the botnet is really good, even a 10G port server won't handle it

For my power testing I used to use a 10G dedicated server but I always crashed it, so yeah I knew the power was good but you will never get an accurate reading nowadays as far as I know because amp attacks should be over 10G (and botnets for the most part) and no one has setup anything like the old graphs and online.net is inaccurate af
