Thread: [Chromium based browser in C#](#)

plartem - September 25, 2015, 12:19 am

Can you give me some examples of Chromium based browsers (or just browsers with enabled JS) , which i can use in my application?

Corios - September 25, 2015, 1:24 am

<https://awesomium.codeplex.com/> is the only popular one, because of how good it is.

Rawrrasaurus - September 25, 2015, 6:19 am

^ Awesomium is going to be the best one you are going to find. Too bad it is so large :/

Programmist - September 29, 2015, 1:47 am

If you're not interested in Awesomium, you can take a look at Webkit .NET. It's another browser alternative instead of the default control Microsoft provides.

hankaf - September 29, 2015, 2:37 am

I've been using awesomium for quite some time now, and I do have to admit that its pretty nice. Sure, I come across issues with it here and there, but there have only been a few that can't be fixed with a workaround.

The biggest nuisance I've found so far while working with awesomium is the fact that they use a pretty out of date useragent, but that can easily be fixed with the proper code.

The problems I've yet to find solutions to have to do with awesomium's ability to handle html5. I really wanted to make a RS3 bot with awesomium, but I simply couldn't access the game due to issues with awesomium's inability to handle blob constructors. Had to move on to a different method, but overall awesomium is fantastic for most purposes.

What about CefSharp? I've had good experiences with it
