What is it?

This tool allows you to edit anyone's Skype message and / or delete messages.
This is NOT just client sided, you and the other person will be able to see it!
Does not work with Win10 or Mac

Aren't there free ones?

Correct, if you dig hard enough you will find one for free.
But remember, there is always the risk of you downloading malware or running malware with those free ones.

With this you are 100% safe guaranteed!

What does it look like?

Virus Scan

your scan is fucked up,
and how the fuck can you get infected with the public method ?

its just fiddler and web.skype.com....

it wasnt negative,
secondary "negative" comments arent disallowed just sale thrashing,
it was just a question why the public exploit is risking you aylmao

I had purchased this 1-2 days ago, and it does not work on Mac, my preferred OS. So Mac users, just keep that in mind. Fam was kind enough to refund me just over 50% of my original purchase even though his ToS says no refunds. ?

vouch, very nice tool & work perfectly

Lykos Thrylos - September 29, 2015, 4:07 pm
Downloaded this, opened it using cmd, nothing happens. Opened cmd as admin, opened the jar file with Command Prompt. Didn't work, it didn't edit any message. Then, found that I had to downgrade my Skype to 7.8 or under. Works now, thanks

Grievous????? - September 30, 2015, 12:05 am
Thanks for the kind words.
All who have messages me asking for support, I will be home on my PC in a few hours.

Your scan is broken.
if it doesn't shows the names of the av's it means the file wasn't scanned properly.

Materialize - September 30, 2015, 6:48 am
Does this work on all messages sent in the past (including those sent more than an hour ago)?
Would you demonstrate it to me? I am very interested to purchase!

The file is not infected (at least virus scans say it's not). The AV scan provided by fam is legit.

That's the definition of patched. Lol. I don't care of your TOS, do you think that this is how the world works? Yeah, I'll sell a product that isn't mine and say in the TOS "You can't make a scam report on me and you can't refund for any reason even if it doesn't work" Same bullshit. You refunded 50% to other people and not me? You know your title is misleading, and you're making profit out of it. Don't act like I'm an idiot.

Oh, will you be able to provide the 50% refund you promised me via private message?

No, because you're a scammer? I'll leave you until the end of the day (Western europe time) then the scam report will be opened.

To everyone: this is patched in the latest version of Skype. OP is saying "not patched" because nobody updated (which is true) but this way he sells a product that he didn't make (GGhost did) and that is patched.
